PROCESSING CHEMICALS
CP-48S PC
A Friendlier Solution

Chemical replenishment is made simple and virtually fool-proof thanks to Fujifilm's new cartridge solution with Vision Technology System. This long-lasting chemical cartridge is compact and easy to carry. Vision Technology System verifies correct position in the cartridge during manufacture. Mixing is automatic so errors are eliminated and the chemicals don't come in contact with your hands. The cartridge is also environmentally friendly, utilizing 100% recyclable plastic containers.

1. Simple and Clean

The all-in-one cartridge is easily loaded in your Frontier System. The printer processor draws the chemicals as needed, mixes them automatically, and even rinses the containers when empty.

2. Compact

The containers in the cartridge are only half their previous size. This is made possible through advanced technology that concentrates the chemicals more fully. Now you can keep more chemicals in less storage space.

3. Environmentally Friendly

100% recyclable plastic containers use half as much plastic as before. Improvements in manufacturing, transportation and recycling contribute to the reduction of energy use and carbon dioxide emissions by up to 40% in comparison with previous chemical systems.

4. Vision Technology System

New Vision Technology allows verification for the correct positioning in the cartridge during production, further ensuring elimination of mixing errors, which result in tank contamination.
