PREFERRED PAPER

TAKING THE MARKETPLACE STANDARD TO PREFERRED DISTINCTIVE PRINTS FROM CRYSTAL ARCHIVE TECHNOLOGY YOU KNOW AND TRUST

Fujicolor Crystal Archive Preferred Paper is our latest offering of Fujifilm's Crystal Archive family of color paper, for use in both digital and conventional systems. We understand in today's competitive marketplace a distinctive edge is critical for customer satisfaction, and Fujicolor Crystal Archive Preferred Paper is an opportunity to create the distinction you want!

You will get the same results you have grown to know and trust from Fujicolor Crystal Archive technologies. These results include vivid color reproduction, brilliant whites, and excellent image stability. Distinctive physical characteristics include a Gold Fujicolor Crystal Archive backprint and a thicker, somewhat stiffer base.

This RA-4 paper is easy to use in the lab, and with the added benefit of sensitometric compatibility with Fujicolor Crystal Archive Type II, making the transition to printing on Fujicolor Archive Preferred Paper could not be easier. Exceptional Crystal Archive image stability assures your Customers' color photographs will withstand the test of time with unparalleled silver halide print permanence. Fujicolor Crystal Archive Preferred Paper will deliver beautiful prints, with the consistency and performance you have come to expect from the family of Fujicolor Crystal Archive paper and print materials

PREFERRED PAPER

Optimized Silver Halide Crystals for Laser Exposure Yet Optically Compatible – Excellent prints from Frontier system laser printers, as well as other digital exposure systems and conventional photographic printers.

Beautiful colors ranging from subtle shades of green, more vivid blues and reds – Skin tones appear natural and cleaner. Gradation is smooth and neutral.

Brilliant whites with clear and expressive highlight details.

Gold Fujicolor Crystal Archive backprint.

Thicker somewhat stiffer base means prints will lie flat.

Excellent resistance to light fade and long-term dark storage.

Sensitometric compatibility with Fujicolor Crystal Archive Type II ease production.
