Meaning of Symbols

| Important: | Important must be followed to avoid damage to this product. |
| Note: | Notes contain important information on the operation of this product. |

Operating System Versions

In this documentation, the following abbreviations are used.

**Windows refers to Windows 8, 7, XP.**
- Windows 8 refers to Windows 8, Windows 8 Pro.
- Windows 7 refers to Windows 7 Professional.
- Windows XP refers to Windows XP Professional.

**Macintosh refers to Mac OS X.**
- Mac OS X refers to Mac OS X 10.5.8/10.6.x/10.7.x/10.8.x/10.9.x.

Installing the printer driver

System Requirements

The following operating systems support the printer driver.

Make sure your computer meets the following requirements.

Windows

<table>
<thead>
<tr>
<th>Operating system</th>
<th>Windows XP Professional (SP3)</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Windows 7 Professional (SP1) 32/64 bit</td>
</tr>
<tr>
<td></td>
<td>Windows 8 Pro 32/64 bit</td>
</tr>
<tr>
<td></td>
<td>Windows 8.1 Pro 32/64 bit</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Recommended computer specifications</th>
<th>CPU: Depends on the application</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Memory: 1 GB or more</td>
</tr>
<tr>
<td></td>
<td>HDD: 32 GB or more free space</td>
</tr>
</tbody>
</table>

Mac OS X

Installing the printer driver (Windows)

The Maintenance Tool is also installed with the printer driver.

**Important:**

- You must log on as a user with administrative privileges.
- In Windows 7/Windows 8, if an Administrator password or confirmation is requested, enter the password and then continue with the operation.

**Note:**

- See the "Maintenance Tool Operation Guide" for more details on the Maintenance Tool.
- When using paper other than dedicated paper, update the paper information in the Maintenance Tool.
Installing the printer driver

1. Double-click Setup.exe.

2. Next, follow the on-screen instructions.

   When a message telling you to turn on the printer is displayed, connect the cable to the printer, and then turn on the printer.

Note:
- The printer driver name is registered as "FUJIFILM DX100". Specify this name when printing from an application.
- When installing the printer driver on a second printer, the name is "FUJIFILM DX100 (copy 1)".
Installing the Printer Driver (Mac OS X)

The Maintenance Tool is also installed with the printer driver.

**Important:**
- You must log on as a user with administrative privileges.
- If an Administrator password or confirmation is requested, enter the password and then continue with the operation.

1. Turn off the printer and then connect the printer to a computer with a USB cable.

2. Double-click DX Printer Setup.dmg.

3. When the screen is displayed, double-click DX Printer Setup.app.
Follow the on-screen instructions to install.

When the following screen is displayed, you should normally select **Skip this operation**.

**Note:**
When using paper other than dedicated paper, select **Update the paper information**.
Printer Driver Functions

The printer driver coordinates print instructions from another application to the printer.

The main functions of the printer driver are described below.

- Converts print data received from applications into printable data and sends it to the printer.
- Set print conditions such as the paper type and size on the printer driver’s Settings screen.
- Windows only;
  Start the Maintenance Tool, and then from your computer you can perform adjustment and maintenance operations such as checking the printer’s status, making settings, performing head cleaning and so on.

☞ "Maintenance Tool Operation Guide"
Settings Screen (Windows)

Main screen

On the **Main** screen, you can set items and the print quality to create the best prints possible.

For more information on displaying the printer driver's **Main** screen, see "Basic Printing Methods (Windows)".

Basic Printing Methods (Windows)

Printing from PhotoShop

This section uses Adobe Photoshop CS6 as an example of printing image data on your computer.

Operations may differ depending on the application software being used. See the manual supplied with the application software for more details.

1. Start Adobe Photoshop CS6, and open an image.

2. Click Image Size from the Image menu to display the Image Size screen.

3. Set the image size and resolution.

   Select Constrain Proportions, and match the Width and Height settings to the paper size.

   Set the Resolution. In this example, we set 360 pixel/inch.

   When you have finished making settings, click OK.
Note:
You can create clear print outs by setting the Resolution so that a multiple of this setting is the printer’s Image Quality resolution.

We recommend setting multiples of 180 pixel/inch because the settings for Image Quality are either High Speed (360 dpi), Standard (720 dpi), or High Image Quality (1440 dpi).

4 Click Print from the File menu to display the Print Settings screen.

5 Select this printer from Printer on the Print Settings screen, and then click Print Settings.
Make the necessary settings.

**Paper Type**: Set the paper being used.

**Image Quality**: Normally set Standard. If you want to print using high image quality, set High Image Quality. If you want to print quickly, set High Speed.

**Paper Size**: Set the size of the paper used for printing. Make sure this is the same as the image size you set in step 3.

“Settings Screen (Windows)” on page 9

When you have finished making settings, click OK.
Set each item, such as color management and print position, while checking the image displayed on the Print Settings screen.

Note:
- When the printer driver’s Color Management is set to Color Controls (default), select Document in Color Management, and then select Printer Manages Colors in Color Handling.
  
  "Color Correction" on page 28

- When performing detailed color management using the PhotoShop functions, match the Color Management conditions to these settings. See the manual supplied with PhotoShop for more details on each function.
  
  "Color Correction" on page 28

Click **Print**.

**Note:**
If the image size is larger than the print size, the following screen is displayed.
Click **Proceed**. If you click **Cancel**, printing is canceled and you are returned to the application’s screen.
Select this printer, and then click **Print**.

Print data is sent to the printer.

**Note:**
*This screen may not be displayed depending on the application. After performing step 8, print data is sent to the printer.*

This completes this section.
Canceling Printing

This section explains how to cancel printing.

You can cancel printing from the computer while data is being sent.

1. Double-click the printer icon on the Taskbar to display the Print queue.

2. Click Printer - Cancel All Documents.

To delete specific print data, select the print data, and then click Cancel from the Documents menu.

Note:
- You can also display the Print queue screen by following the steps below.
  - Windows 7: Click Start - Devices and Printers - “FUJIFILM DX100”, and then click See what's printing.
  - Windows 8: Point to the top right or bottom right of the Desktop to display Charms, click Search, and then click Control Panel. Click View devices and printers, “FUJIFILM DX100”, and then click See what's printing.
  - Windows XP: Click Start, Control Panel, Printers and Other Hardware, and then Printers and Faxes. Double-click the “FUJIFILM DX100” icon in the folder displayed.
- You cannot delete print data that has already been sent to the printer.

This completes this section.
Basic Printing Methods (Mac OS X)

Printing from PhotoShop

This section uses Adobe Photoshop CS6 as an example of printing image data on your computer.

Operations may differ depending on the application software being used. See the manual supplied with the application software for more details.

1. Start Adobe Photoshop CS6, and open an image.

2. Click Image Size from the Image menu to display the Image Size screen.
3 Set the image size and resolution.
Select **Constrain Proportions**, and match the **Width** and **Height** settings to the actual paper size.

Set the **Resolution**. In this example, we set 360 pixel/inch.

When you have finished making settings, click **OK**.

![Image Size dialog box](image)

**Note:**
You can create clear print outs by setting the **Resolution** to a multiple of the printer’s **Image Quality** resolution.
We recommend setting multiples of 180 pixel/inch because the settings for **Image Quality** are either **High Speed** (360 dpi), **Standard** (720 dpi), or **High Image Quality** (1440 dpi).

4 Click **Print** from the **File** menu to display the **Print Settings** screen.

![Print Settings](image)
Select this printer from Printer on the Printer Settings screen, and then click Print Settings.

Make the necessary settings.

**Paper Size:** Set the size of the paper used for printing. Make sure this is the same as the image size you set in step 3.

**Paper Type:** Set the paper being used.

**Image Quality:** Normally set Standard. If you want to print using high image quality, set High Image Quality. If you want to print quickly, set High Speed.

“Settings Screen (Mac OS X)” on page 13

When you have finished making settings, click Print.
Set each item, such as print direction or position and color management, while checking the image displayed on the Print Settings screen.

**Note:**
When performing detailed color management using the PhotoShop functions, set the Color Management to match these settings. See the manual supplied with PhotoShop for more details on each function.

☞ “Color Correction” on page 28

Click Print.
Select this printer, and then click **Print**.

Print data is sent to the printer.

---

**Note:**
This screen may not be displayed depending on the application. After performing step 8, print data is sent to the printer.

This completes this section.
Canceling Printing

This section explains how to cancel printing.

You can cancel printing from the computer while data is being sent.

1. Click the printer icon in the Dock.

2. Select the job you want to cancel, and then click X (or Delete).

Note: You cannot delete print data that has already been sent to the printer.

This completes this section.
Various Print Functions

Color Correction

Color Correction Settings

You can perform color correction using the printer driver in the following three ways.

Choose the best method according to the application you are using, the operating system environment, the aim of the print out and so on.

Setting colors manually (Windows only)
Manually adjust the color space and color tone settings used for printing. This is useful if the application does not have its own color management function.

☞ “Setting colors manually (Windows only)” on page 29

Color management from the application (no color correction)
This method is for printing from applications that support color management. All color management processes are carried out by the application’s color management system. This method is useful when you want to obtain the same color management results using a common application among different operating system environments.

☞ “Color management from the application (no color correction)” on page 32

Color management from the printer driver
Performs color management using the operating system’s color management system. Windows uses ICM and Mac OS X uses ColorSync. This is effective in producing similar print results from different applications under the same operating systems. However, you also need an application that supports color management.

☞ “Color management from the printer driver (ICM) (Windows)” on page 34
☞ “Color management by printer driver (ColorSync) (Mac OS X)” on page 36
Setting colors manually (Windows only)

You can select the color space used for color correction from sRGB or Adobe RGB. You can also adjust the color tone manually while viewing a preview image.

- sRGB: Normally, select sRGB.
- Adobe RGB: Select when printing data based on the Adobe RGB color space.

When Color Controls is selected, you can fine tune the brightness, contrast, saturation, color balance, and so on.

1. When using applications featuring a color management function, specify how to adjust colors from these applications.

When using applications without a color management function, start from step 2.

Depending on the type of the application, make the settings following the table below.

<table>
<thead>
<tr>
<th>Application software</th>
<th>Color Management Settings</th>
</tr>
</thead>
<tbody>
<tr>
<td>Adobe Photoshop CS5/CS6</td>
<td>Printer Manages Colors</td>
</tr>
<tr>
<td>Adobe Photoshop Lightroom 3/4</td>
<td>No Color Management</td>
</tr>
<tr>
<td>Other applications</td>
<td></td>
</tr>
</tbody>
</table>

Example of Adobe Photoshop CS6
Open the Print Settings screen.

Select Normal Printing from Color Management. Select Printer Manages Colors in Color Handling.
Various Print Functions

2. Click **Print Settings** to display the printer driver's Settings screen.

3. On the **Main** screen, select **Color Controls** in **Color Management**, and then click **Advanced**.

4. Select **Mode**.

   **sRGB**: Manages colors using sRGB. Prints at the optimum color tones. This should normally be selected.

   **Adobe RGB**: Manages colors based on the larger Adobe RGB color space. Select when printing image data using the Adobe RGB color space information.
Make the necessary settings.

**Color Adjustment**

Method:

**Brightness:** Adjusts the brightness of the image.

**Contrast:** Adjusts the contrast (difference between light and dark) of the image.

When the contrast is raised, bright sections become brighter, and dark sections become darker. When the contrast is lowered, the difference between light and dark sections decreases.

**Saturation:** Adjusts the saturation (color clarity) of the image. When the saturation is raised, colors become vivid. When the saturation is lowered, the colors become dull until they are close to gray.

**Color circle:** When the color circle is selected as the **Color Adjustment Method**, you can click on the color circle to adjust the density bar.

You can also adjust the tone by entering horizontal and vertical coordinates.

**Slide bar:** When the slide bar is selected as the **Color Adjustment Method**, you can adjust the colors with the slide bar.

**Note:**

You can adjust the correction value while checking the sample image at the top of the screen.

Set other items if necessary, and then print.

This completes this section.
Color management from the application (no color correction)

Print using applications with a color management function. Enable the color management settings in the application and disable the printer driver’s color adjustment function.

1. Make the settings for color adjustment using the application.

Example of Adobe Photoshop CS6
Open the Print Settings screen.

Select Normal Printing from Color Management. Select Photoshop Manages Colors as the Color Handling setting, and then select the Printer Profile and the Rendering Intent.

Note:
If you are not using an original printer profile, select DX100 360 or DX100 720 from the Printer Profile drop-down menu.

2. Click Print Settings to display the printer driver's Settings screen.
3 Turn off color management.

Windows: On the Main screen, select No Color Adjustment from Color Management.

Mac OS X: Select Color Matching from the list, and then click Off (No Color Adjustment).

4 Set other items if necessary, and then print.

This completes this section.
Color management from the printer driver (ICM) (Windows)

Performs color management from the printer driver. If the application does not support color management, select Driver ICM (Basic) or Driver ICM (Advanced). If the application does support color management, select Host ICM. When performing color management using Host ICM, use image data that contains an embedded input profile.

1 Make the settings for color adjustment using the application.

Depending on the type of the application, make the settings following the table below.

<table>
<thead>
<tr>
<th>Application software</th>
<th>Color Management Settings</th>
</tr>
</thead>
<tbody>
<tr>
<td>Adobe Photoshop CS5/CS6</td>
<td>Printer Manages Colors</td>
</tr>
<tr>
<td>Adobe Photoshop Lightroom 3/4</td>
<td></td>
</tr>
<tr>
<td>Other applications</td>
<td>No Color Management</td>
</tr>
</tbody>
</table>

Example of Adobe Photoshop CS6

Open the Print Settings screen.

Select Color Management and then Normal Printing. Select Printer Manages Colors in Color Handling.

When using applications without a color management function, start from step 2.

2 Click Print Settings to display the printer driver’s Settings screen.
On the Main screen, select ICM from Color Management, and then click Advanced.

Select ICM Mode.

**Driver ICM (Basic):** Specify the input profile used to process the entire image data.

**Driver ICM (Advanced):** Specify the input profile for each image such as photos, graphics, and text data.

**Host ICM:** Specify when printing from applications that support color management.

Make the necessary settings.

When **Driver ICM (Basic)** or **Driver ICM (Advanced)** is selected, specify an input profile.
When **Show all profiles** is selected, specify the Intent and Printer Profile.

### Table: Intent and Explanation

<table>
<thead>
<tr>
<th>Intent</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>Saturation</td>
<td>Performs conversion, without changing the current saturation.</td>
</tr>
<tr>
<td>Perceptual</td>
<td>Performs conversion so that a more visually natural image is produced. This feature is used when a wider gamut of color is used for image data.</td>
</tr>
<tr>
<td>Relative Colorimetric</td>
<td>Performs conversion so that a set of color gamut coordinates and white point (color temperature) coordinates in original data match their corresponding print coordinates. This feature is used for many types of color matching.</td>
</tr>
</tbody>
</table>
Various Print Functions

<table>
<thead>
<tr>
<th>Intent</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>Absolute Colorimetric</td>
<td>Performs conversion so that absolute color gamut coordinates are assigned to both the original and print data. Therefore, color tone adjustment is not performed on any white point (or color temperature) for the original or print data. This feature is used for special purposes such as logo color printing.</td>
</tr>
</tbody>
</table>

6 Set other items if necessary, and then print.

This completes this section.

Color management by printer driver (ColorSync) (Mac OS X)

Performs color management from the printer driver. The application needs to support ColorSync. When performing color management using ColorSync, use image data in which an input profile is embedded.

1 Make the settings for color adjustment using the application.

Depending on the type of the application, make the settings following the table below.

<table>
<thead>
<tr>
<th>Application software</th>
<th>Color Management Settings</th>
</tr>
</thead>
<tbody>
<tr>
<td>Adobe Photoshop CS5/CS6</td>
<td>Printer Manages Colors</td>
</tr>
<tr>
<td>Adobe Photoshop Lightroom 3/4</td>
<td></td>
</tr>
<tr>
<td>Other applications</td>
<td>No Color Adjustment</td>
</tr>
</tbody>
</table>
Example of Adobe Photoshop CS6
Open the Print Settings screen.

Select Normal Printing from Color Management. Select Printer Manages Colors in Color Handling.

2 Click Print Settings to display the printer driver's Settings screen.

3 Select Color Matching from the list, and then click ColorSync. And then select Profile.

4 Set other items if necessary, and then print.
Various Print Functions

This completes this section.
Borderless Printing

You can print your data without borders (margins).

The printer driver enlarges the print data to a size slightly larger than the paper size and prints the enlarged image. The sections which are beyond the paper edges are not printed; therefore, resulting in borderless printing. You can set the amount that extends beyond the edges of the paper in the printer driver.

**Types of Borderless Printing Methods**
You can perform borderless printing using the following two methods: Auto Expand or Retain Size.

**Auto Expand**
The printer driver enlarges the print data to a size slightly larger than the paper size and prints the enlarged image. The sections which are beyond the paper edges are not printed; therefore, resulting in borderless printing.

Use settings such as Page Layout in the applications to set the size of the image data as follows.

- Match the paper size and page setting for the print data.
- If the application has margin settings, set the margins to 0 mm.
- Make the image data as large as the paper size.

**Retain Size**
Create the print data larger than the actual paper size in the applications to produce borderless output. The printer driver does not enlarge the image data. Use settings such as Page Layout in the applications to set the size of the image data as follows.

- Make image size setting so that the print data is 1.69 mm larger to the left and right than the actual paper size.
- If the application has margin settings, set the margins to 0 mm.
- Make the image data as large as the paper size.
Select this setting if you want to avoid image enlargement by the printer driver.

### Setting Procedure

**Windows**

1. Display the printer driver’s **Main** screen.  
   
   “Basic Printing Methods (Windows)” on page 16

2. On the **Main** screen, set items necessary for printing such as the **Paper Type** and the **Paper Size**.

3. Select **Borderless**.
Select **Auto Expand** or **Retain Size** as the borderless method.

When **Auto Expand** is selected, set the slider to set the amount of enlargement.

![Printing Preferences dialog box with Borderless option highlighted]

**Note:**
Moving the slider towards **Mid** or **Min** decreases the image enlargement ratio. Therefore, some margins may appear at the edges of the paper depending on the paper and printing environment.

5. Set other items if necessary, and then print.

This completes this section.
Mac OS X

1. Display the printer driver’s **Printer Settings** screen.

   ➡ “Settings Screen (Mac OS X)” on page 13

2. Select the print size and borderless printing method in Paper Size.

3. When **Auto Expand** is selected in Paper Size, select the amount of enlargement.
Various Print Functions

Note:
Selecting Mid or Min decreases the image enlargement ratio. Therefore, some margins may appear at the edges of the paper depending on the paper and printing environment.

4 Set other items if necessary, and then print.

This completes this section.
Printing on Non-regular Paper Sizes

You can print on paper sizes not included in the printer driver. The printer can be used with paper of the following sizes.

<table>
<thead>
<tr>
<th>Width</th>
<th>4.02, 5.00, 5.98, 7.99, 8.27 inch</th>
</tr>
</thead>
<tbody>
<tr>
<td>Length</td>
<td>3.50 to 39.37 inch</td>
</tr>
</tbody>
</table>

**Important:**
Depending on the application, output sizes may be restricted.

Setting Procedure

**Windows**

1. Display the printer driver’s Main screen.
   
   "Basic Printing Methods (Windows)” on page 16

2. On the Main screen, select User Defined from Paper Size.

3. On the User Defined Paper Size screen enter a Paper Size Name, set the paper size, and then click Save.
Note:
- To change the registered paper size, select the paper size name from the list on the left.
- To delete a registered paper size, select the paper size name from the list on the left, and then click Delete.
- You can register up to 30 paper sizes.

4. Click OK.

The size entered in the paper size list box is registered.
You can then print as normal.

**Mac OS X**

1. Display the printer driver’s Page Setup screen.
   - “Settings Screen (Mac OS X)” on page 13

2. Select Manage Custom Sizes from Paper Size.
Click +, and then enter the paper size name.

Enter the **Width** and **Height** for the **Paper Size** as well as the margins, and then click **OK**.

Set the page size range and the printer margins according to the printing method.

**Note:**
- To edit a saved custom size, choose its name from the list on the left of the **Custom Paper Sizes** screen.
- To copy a saved custom size, select the size in the list on the left and click **Duplicate**.
- To delete a saved custom size, select it in the list on the left and click `-`.
- The custom paper size setting differs depending on the operating system version. See your operating system’s documentation for details.

Click **OK**.

You can select the paper size you saved from the Paper Size pop-up menu.

You can then print as usual.
Troubleshooting

Note:
For problems not related to the printer driver, see the "Operation Guide".
☞ "Operation Guide" - "Troubleshooting"

When an Error Message Is Displayed

When an error message is displayed, check the solution on the screen and take the required measures.

You cannot print (because the printer does not work)

<table>
<thead>
<tr>
<th>Cause</th>
<th>What to do</th>
</tr>
</thead>
<tbody>
<tr>
<td>The printer driver is not installed correctly.</td>
<td>Is the icon for this printer displayed in the Devices and Printers, Printers and Faxes folder?</td>
</tr>
<tr>
<td></td>
<td>☐ Yes</td>
</tr>
<tr>
<td></td>
<td>The printer driver is installed. See the following item, &quot;The printer is not connected correctly to the computer&quot;.</td>
</tr>
<tr>
<td></td>
<td>☐ No</td>
</tr>
<tr>
<td></td>
<td>The printer driver is not installed. Install the printer driver.</td>
</tr>
<tr>
<td>The printer is not communicating with the computer.</td>
<td>Does the printer port setting match the printer connection port?</td>
</tr>
<tr>
<td></td>
<td>Check the printer port.</td>
</tr>
<tr>
<td></td>
<td>Click the Port tab on the printer’s Properties screen, and check if the printer name’s port is set.</td>
</tr>
<tr>
<td></td>
<td>If it is not indicated, the printer driver is not installed correctly.</td>
</tr>
<tr>
<td></td>
<td>Delete and reinstall the printer driver.</td>
</tr>
<tr>
<td>An error has occurred on the printer.</td>
<td>Check the lights on the printer and the message on the screen.</td>
</tr>
<tr>
<td></td>
<td>See the &quot;Operation Guide&quot; for the solution.</td>
</tr>
<tr>
<td>The printer stops printing.</td>
<td>Is the status of the print queue Pause?</td>
</tr>
<tr>
<td></td>
<td>If you stop printing or the printer stops printing because of an error, the print queue enters a Pause status. You cannot print in this status.</td>
</tr>
<tr>
<td></td>
<td>Double-click the printer icon in the Devices and Printers or Printers and Faxes folder; if printing is paused, open the Printer menu and clear the Pause check box.</td>
</tr>
</tbody>
</table>
## Troubleshooting

### The printer sounds like it is printing, but nothing prints

<table>
<thead>
<tr>
<th>Cause</th>
<th>What to do</th>
</tr>
</thead>
</table>
| The print head moves, but nothing prints.  | **Confirm the printer operation.**  
See the "Maintenance Tool Operation Guide" to print a nozzle check pattern, and then check the printer's operations and status. |
| The nozzle check pattern is not printed correctly. | **Perform head cleaning.**  
The nozzles may be clogged. See the "Maintenance Tool Operation Guide" to perform head cleaning, and then try printing the nozzle check pattern again. |

### The prints are not what you expected

<table>
<thead>
<tr>
<th>Cause</th>
<th>What to do</th>
</tr>
</thead>
</table>
| Print quality is poor, uneven, too light, or too dark. | **Are the print head nozzles clogged?**  
If the nozzles are clogged, specific nozzles do not fire ink and the print quality declines. See the "Maintenance Tool Operation Guide" to perform a nozzle check.  
**Are the Paper Type settings correct?**  
Make sure the Paper Type settings on the printer driver's Main screen match the paper to be printed on.  
**Have you compared the printing result with the image on the display monitor?**  
Since monitors and printers produce colors differently, printed colors will not always match on-screen colors perfectly. |
| The color is not exactly the same as another printer. | **Colors vary depending on the printer type due to each printer's characteristics.**  
Because inks, printer drivers, and printer profiles are developed for each printer model, the colors printed by different printer models are not exactly the same. |
| The print is not positioned properly on the paper. | **Have you specified the print area?**  
Check the print area in the settings of the application and the printer.  
**Are the paper size settings correct?**  
If the option selected for Paper Size in the printer driver does not match the paper size (width) loaded in the printer, the print may not be in the correct position or some of the data may be printed over the edges of the paper.  
Check the Paper Size setting on the printer driver's Main screen. |
| Margins appear in borderless printing.     | **Are the settings for the print data in the application correct?**  
Make sure that the paper settings in the application are correct as well as in the printer driver.

— Frontiers S Printer Driver Operation Guide —
Uninstalling the Printer Driver (Windows)

Note:
- You must log on as a user with administrative privileges.
- In Windows 7/Windows 8, if an Administrator password or confirmation is requested, enter the password and then continue with the operation.

1. From the Control Panel click Uninstall program (or Add or remove programs).

2. Select "FUJIFILM DX100 Software", and then click Uninstall (or Del).

3. Follow the on-screen instructions to continue.
   - When the delete confirmation message appears, click Yes.
   - The Maintenance Tool and the printer driver are removed at the same time.

   Restart the computer if you are reinstalling the printer driver.
Uninstalling the Printer Driver (Mac OS X)

1. From Finder - System - Library, open the **Printers** folder.

2. Drag and drop the following items in the Trash.
   - The InkjetPrinterC folder in the Fujifilm folder
   - The FUJIFILM DX100.gz file in the PPDs - Contents - Resources folder
