This manual will show you how to use your FUJIFILM DIGITAL CAMERA FinePix S5100/FinePix S5500 correctly. Please follow the instructions carefully.
To prevent fire or shock hazard, do not expose the unit to rain or moisture.

For customers in the U.S.A.

Tested To Comply With FCC Standards

FOR HOME OR OFFICE USE

FCC Statement

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

CAUTION

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

You are cautioned that any changes or modifications not expressly approved in this manual could void your authority to operate the equipment.

Notes on the Grant:

To comply with Part 15 of the FCC rules, this product must be used with a Fujifilm-specified ferrite-core AV cable, USB cable and DC supply cord.

For customers in Canada

CAUTION

This Class B digital apparatus complies with Canadian ICES-003.

Please read the Safety Notes (P.118) and make sure you understand them before using the camera.

IMPORTANT

NOTICE

BEFORE OPENING THE CD-ROM PROVIDED BY FUJI PHOTO FILM CO., LTD., PLEASE READ THIS END USER LICENSE AGREEMENT CAREFULLY. ONLY IF YOU AGREE WITH THIS AGREEMENT, SHOULD YOU USE THE SOFTWARE RECORDED ON THE CD-ROM, BY OPENING THE PACKAGE, YOU ACCEPT AND AGREE TO BE BOUND BY THIS AGREEMENT.

End User License Agreement

This End User License Agreement (“Agreement”) is an agreement between Fujifilm Photo Film Co., Ltd. (“FUJIFILM”) and you, which sets forth the terms and conditions of the license granted to you for the use of the software provided by FUJIFILM.

The CD-ROM contains third party software. In case a separate agreement is provided by a third party supplier for its software, the provisions of such separate agreement shall control the use of such third party software, prevailing over those of this Agreement.

1. Definitions.

(a) “Media” means the CD-ROM titled “Software for FinePix AX” which is provided to you together with this Agreement.
(b) “Software” means the software which is recorded on Media.
(c) “Documentation” means the operation manuals of Software and other related written materials which are provided to you together with Media.
(d) “Product” means Media (including Software) and Documentation collectively.

2. Use of Software.

FUJIFILM grants to you a nontransferable, nonexclusive license:
(a) to install one copy of Software onto one computer in binary machine executable form.
(b) to use Software on the computer onto which Software is installed; and
(c) to make one backup copy of Software.

3.1 You shall not distribute, rent, lease or otherwise transfer all or any part of Software, Media or Documentation to any third party without the prior written consent of FUJIFILM, except as expressly granted by FUJIFILM hereunder.
3.2 You shall not modify, adapt or translate Software or Documentation.
3.3 You shall not, or shall not have any third party, reverse-engineer, decompile, or disassemble Software.

4. Ownership.

All copyrights and other proprietary rights to Software and Documentation are and will remain the property of FUJIFILM or its suppliers as indicated on or in Software or Documentation. Nothing contained herein shall be construed, expressly or implicitly, as transferring or granting any right, license, or title to you other than those expressly granted under this Agreement.

5. Limited Warranty.

FUJIFILM warrants to you that Media is free from any defect in material and workmanship under normal use for ninety (90) days from the date of your receipt of Media. Should Media not meet the foregoing warranty, FUJIFILM will, at its option, either replace Media with another Media that is in compliance with all applicable specifications or refund the purchase price paid by you for Media if you return it to FUJIFILM promptly at your own expense, or if you decide to keep the defective Media, you agrees to notify FUJIFILM in writing of any defect, FUJIFILM’s entire liability and your sole and exclusive remedy with regard to any defect in Media shall be expressly limited to such FUJIFILM’s replacement of Media or refund.

6. DISCLAIMER OF WARRANTY.

EXCEPT AS PROVIDED IN SECTION 5 HEREIN, FUJIFILM PROVIDES PRODUCT “AS IS” AND WITHOUT WARRANTIES OF ANY KIND, EXPRESS OR IMPLIED. FUJIFILM SHALL MAKE NO WARRANTY, EXPRESS, IMPLIED OR STATUTORY, AS TO ANY OTHER MATTERS, INCLUDING, BUT NOT LIMITED TO NON-INFRINGEMENT OF ANY COPYRIGHT, PATENT, TRADE SECRET, OR ANY OTHER PROPRIETARY RIGHTS OF ANY THIRD PARTY, MERCHANTABILITY, OR FITNESS FOR ANY PARTICULAR PURPOSE.

7. LIMITATION OF LIABILITY.

IN NO EVENT SHALL FUJIFILM HAVE ANY LIABILITY FOR ANY GENERAL, SPECIAL, DIRECT, INDIRECT, CONSEQUENTIAL, OR OTHER DAMAGES ARISING OUT OF THE USE OF OR INABILITY TO USE PRODUCT EVEN IF FUJIFILM HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

8. No export.

You acknowledge that neither Software nor any part thereof, will be transferred, or exported to any country or used in any manner in violation of any export control laws and regulations to which Software is subject.

In case you breach any of the terms and conditions hereof, FUJIFILM may immediately terminate this Agreement without any notice.

10. Term.

This Agreement is effective until the date when you cease to use Software, unless earlier terminated in accordance with Section 9 hereof.

11. Obligation upon termination.

Upon termination or expiration of this Agreement, you shall, at your own responsibility and expense, delete or destroy immediately all Software (including its copies), Media and Documentation.

This Agreement shall be governed by and construed in accordance with laws of Japan.

Preface

Test Shots Prior to Photography
For important photographs (such as weddings and overseas trips), always take a test shot and view the image to make sure that the camera is working normally.

Fuji Photo Film Co., Ltd. cannot accept liability for any incidental losses (such as the costs of photography or the loss of income from photography) incurred as a result of faults with this product.

Notes on Copyright
Images recorded using your digital camera system cannot be used in ways that infringe copyright laws without the consent of the owner, unless intended only for personal use. Note that some restrictions apply to the photographing of stage performances, entertainments and exhibits, even when intended purely for personal use. Users are also asked to note that the transfer of xD-Picture Card containing images or data protected under copyright laws is only permissible within the restrictions imposed by those copyright laws.

Liquid Crystal
If the LCD monitor or viewfinder (EVF) is damaged, take particular care with the liquid crystal in the monitor or viewfinder. If any of the following situations arise, take the urgent action indicated.
- If liquid crystal comes in contact with your skin
  Wipe the area with a cloth and then wash thoroughly with soap and running water.
- If liquid crystal gets into your eye
  Flush the affected eye with clean water for at least 15 minutes and then seek medical assistance.
- If liquid crystal is swallowed
  Flush your mouth thoroughly with water. Drink large quantities of water and induce vomiting. Then seek medical assistance.

Notes on Electrical Interference
If the camera is to be used in hospitals or aircrafts, please note that this camera may cause interference to other equipment in the hospital or aircraft. For details, please check with the applicable regulations.

Handling Your Digital Camera
This camera contains precision electronic components. To ensure that images are recorded correctly, do not subject the camera to impact or shock while an image is being recorded.

Trademark Information
- xD and xD-Picture Card™ are trademarks of Fuji Photo Film Co., Ltd.
- IBM PC/AT is a registered trademark of International Business Machines Corp. of the U.S.A.
- Macintosh, Power Macintosh, iMac, PowerBook, iBook and Mac OS are trademarks of Apple Computer, Inc., registered in the U.S. and other countries.
- Adobe Acrobat® Reader® is a trademark of Adobe Systems Incorporated of the U.S.
- Microsoft, Windows, and the Windows logo are trademarks, or registered trademarks of Microsoft Corporation in the United States and/or other countries. Windows is an abbreviated term referring to the Microsoft® Windows® Operating System.

1 Getting Ready

**ATTACHING THE LENS CAP / STRAP / ADAPTER RING**

1. Attach the strap to the strap mounts on the camera. Once you have attached both ends of the strap, check carefully to make sure that the strap is firmly secured.

2. Pull the lens cap cord through the strap.

3. Screw the adapter ring in the direction of the arrow to mount it on the camera.

4. Attaching the lens cap
   - To prevent the lens cap from appearing in the shot when you take pictures, attach the lens cap to the strap.
   - Attach the lens cap to the lens by pressing in on each side of the cap.

**LOADING THE BATTERIES**

**Compatible batteries**
- AA-size alkaline batteries (LR6) (4), or AA-size Ni-MH batteries (HR-AA) (4) (sold separately).
- Please use the same brand and grade AA-size alkaline batteries as those supplied with the camera.

**How to use the batteries**
- Never use the following types of batteries, as this could cause serious problems such as battery fluid leakage or overheating:
  1. Batteries with split or peeling outer casings
  2. Combinations of different types of batteries or new and used batteries together
- Do not use manganese or Ni-Cd batteries.
- Soil, such as fingerprints on the poles of the batteries can shorten the time for which the batteries can be used.
- The time for which AA-size alkaline batteries (referred to hereafter simply as alkaline batteries) can be used varies depending on the brand. Some alkaline batteries may stop providing power more quickly than those supplied with the camera. Note also that due to their nature, the time for which alkaline batteries can be used decreases in cold conditions (0°C to +10°C/+32°F to +50°F). The use of AA-size Ni-MH batteries is better for this reason.
- Use Fujifilm Battery charger (sold separately) to charge AA-size Ni-MH batteries.
- See P.107-108 for other notes on using batteries.
- When first purchased or if left unused for a long period, the amount of time which AA-size Ni-MH batteries can be used may be short. See P.108 for more information.

1. Check that the camera is turned off (indicator lamp is off) before opening the battery cover.
   - If opening the battery cover while the camera is still on, the camera will turn off.
   - Do not apply force to the battery cover.

2. Load the batteries correctly as indicated by the polarity icons.
   - Press on the battery cover to push the batteries down.
   - Slide the battery cover closed.

Do not open the battery cover while the camera is on. This could damage the xD-Picture Card or ruin the image files on the xD-Picture Card.
Set the Power switch to “OFF”. Open the slot cover after checking that the indicator lamp is off.

If opening the slot cover while the camera is still on, the camera will turn off.

Align the indicators on the xD-Picture Card slot and xD-Picture Card and then push the card firmly all the way into the slot.

If the xD-Picture Card is oriented incorrectly, it will not go all the way into the slot. Do not apply force when inserting an xD-Picture Card.

Close the slot cover.

◆ How to replace the xD-Picture Card ◆

Make sure that the camera is turned off before opening the slot cover. Push the xD-Picture Card into the slot and then slowly remove your finger. The lock is released and the xD-Picture Card is pushed out.

Checking the battery charge

Turn the camera on and check the battery charge.

1) There is ample battery charge.
2) There is insufficient charge left in the batteries. The batteries will soon run out. Have a new set of batteries ready.
3) The batteries are depleted. The display will shortly go blank and the camera will stop working. Replace or recharge the batteries.

“C” appears as a small icon on the right-hand side of the screen. “V” appears as a large icon in the center of the screen.

Depending on the camera mode and the type of batteries used, the transition from “C” to “V” may occur more quickly.

Due to the nature of the battery, the battery low warning may appear early when the camera is used in cold locations. This is normal. Try warming the batteries in your pocket or a similar location before use.

Battery level warning
1) The camera’s estimation of the remaining battery charge varies greatly depending on the camera operation mode. Consequently, even if “C” or “V” is not displayed in Playback mode, one of them may appear when you change to Photography mode.
2) Depending on the battery type and the level of charge in the batteries, the camera may run out of power without first displaying a battery level warning. This is particularly likely to happen when batteries that have run out of charge once are re-used.
In situation 2), immediately load new or fully charged replacement batteries.

◆ Power save function ◆

When this function is active, it turns off the screen (sleep mode) to reduce power consumption if the camera is not used for 60 seconds (P.82). If the camera is then left unused for 2 or 5 minutes, the Power save function turns the camera off. To turn the camera back on, set the Power switch to “OFF” briefly and then back to “” or “”.

1) There is ample battery charge.
2) There is insufficient charge left in the batteries. The batteries will soon run out. Have a new set of batteries ready.
3) The batteries are depleted. The display will shortly go blank and the camera will stop working. Replace or recharge the batteries.

“C” appears as a small icon on the right-hand side of the screen. “V” appears as a large icon in the center of the screen.

Depending on the camera mode and the type of batteries used, the transition from “C” to “V” may occur more quickly.

Due to the nature of the battery, the battery low warning may appear early when the camera is used in cold locations. This is normal. Try warming the batteries in your pocket or a similar location before use.

Battery level warning

2) Depending on the battery type and the level of charge in the batteries, the camera may run out of power without first displaying a battery level warning. This is particularly likely to happen when batteries that have run out of charge once are re-used.
In situation 2), immediately load new or fully charged replacement batteries.

◆ Power save function ◆

When this function is active, it turns off the screen (sleep mode) to reduce power consumption if the camera is not used for 60 seconds (P.82). If the camera is then left unused for 2 or 5 minutes, the Power save function turns the camera off. To turn the camera back on, set the Power switch to “OFF” briefly and then back to “” or “”.

1) There is ample battery charge.
2) There is insufficient charge left in the batteries. The batteries will soon run out. Have a new set of batteries ready.
3) The batteries are depleted. The display will shortly go blank and the camera will stop working. Replace or recharge the batteries.

“C” appears as a small icon on the right-hand side of the screen. “V” appears as a large icon in the center of the screen.
1. Turn the Power switch to turn the camera on and off. When turning the camera on, the indicator lamp lights green.

The lens moves when the camera is in “ינה” Photography mode. Take care not to obstruct the lens. Obstructing the lens will cause damage and “ZOOM ERROR” or “FOCUS ERROR” will appear. Take care also not to get fingerprints on the camera lens as this will result in impaired image quality in your shots.

2. When using the camera for the first time after purchasing, the date and time are cleared. Press the “MENU/OK” button to set the date and time.

If the message (see figure at left) does not appear, refer to “Correcting the date and time” (P.15) and check and correct the date settings.

3. Press “иф” or “ה” to select Year, Month, Day, Hour or Minute.

Once you have set the date and time, press the “MENU/OK” button. Pressing the “MENU/OK” button changes the camera to Photography or Playback mode.

At the time of purchase and after leaving the camera for a long period with the batteries removed, settings such as the date and time are cleared. Once the AC power adapter has been connected or the batteries have been installed for 2 hours or more, the camera settings will be retained for roughly 6 hours even if both sources of power are removed.

4. Press “P” or “ר” to select “DATE/TIME”.

When the time displayed passes “12:00”, the AM/PM setting changes.

Holding down “א” or “ו” changes the numbers continuously.

When the time displayed passes “12:00”, the AM/PM setting changes.

5. Press “ף” to select “DATE/TIME”.

Holding down “א” or “ו” changes the numbers continuously.

When the time displayed passes “12:00”, the AM/PM setting changes.

6. Once you have set the date and time, press the “MENU/OK” button. Pressing the “MENU/OK” button displays the menu on the screen.

Changing the date order

1. Press “ף” or “ר” to select “DATE/TIME”.

2. Press “א” or “ו” to move to option 2 and then press “ף” or “ו” to select “DATE/TIME”.

3. Press “ף” or “ר” to move to option 2 and then press “א” or “ו” to select “DATE/TIME”.

4. Press “ף” or “ר” to move to option 2 and then press “א” or “ו” to select “DATE/TIME”.

5. Press “ף” or “ר” to move to option 2 and then press “א” or “ו” to select “DATE/TIME”.

6. Press “ף” or “ר” to move to option 2 and then press “א” or “ו” to select “DATE/TIME”.

7. Always press the “MENU/OK” button after the settings are completed.

Date order | Explanation
---|---
YYYY.MM.DD | Displays the date in the “year. month. day” format.
MM/DD/YYYY | Displays the date in the “month / day / year” format.
DD.MM.YYYY | Displays the date in the “day. month. year” format.

8. Changing the date order

1. Press “ף” or “ר” to select the date order.

2. Press “א” or “ו” to select the order. Refer to the table below for details of the settings.

3. Always press the “MENU/OK” button after the settings are completed.

Date order | Explanation
---|---
YYYY.MM.DD | Displays the date in the “year. month. day” format.
MM/DD/YYYY | Displays the date in the “month / day / year” format.
DD.MM.YYYY | Displays the date in the “day. month. year” format.

9. Correcting the date and time

1. Press the “MENU/OK” button to display the menu on the screen.

2. Press “ף” or “ר” to select “.DATE/TIME” and then press “א” or “ו” to select “DATE/TIME”.

3. Press the “MENU/OK” button.
Using the Camera

This section describes the camera’s functions.

Focus mode selector button
Unlock using the Focus mode selector lock switch. Press the Focus mode selector button to change the focus mode.

Focus mode
S-AF : Single AF
M F : Manual focus
C-AF : Continuous AF

Continuous shooting button
With the " " button held down, press "d" or "c" to select the Continuous shooting mode.

Exposure compensation button
With the " " button held down, press the "d" or "c" button to select the exposure compensation.

Photography mode selector
Turn the Mode dial to select the Photography mode.

- AUTO Auto
- Portrait
- Landscape
- Sports
- Night scene
- P Programmed Auto
- S Shutter-priority Auto
- A Aperture-priority Auto
- M Manual
- Movie

Photography mode
Movie mode

SELECTING THE LANGUAGE

1. Press the “MENU/OK” button to display the menu on the screen.
2. Press “<" or “>” to select “ ” OPTION and then press “A" or “V” to select “SET-UP”.
3. Press the “MENU/OK” button.

2. The “SET-UP” screen appears. Press “<" or “>” to move to option 4 and then press “A" or “V” to select ”LANG.”.

The screens in this manual are shown in English.
See P.81 for more information on the “ ” OPTION menu.

**Photography:**

- Press "T" to zoom in (telephoto).
- Press "W" to zoom out (wide-angle).

**Playback:**

- Press "T" to enlarge the image.
- Press "W" to revert to normal display.

---

**Instructions for the next step in the procedure appear at the bottom of the screen. Press the button indicated.**

For example, to trim the image as shown in the figure at right, press the "MENU/OK" button.

---

**Up, down, left and right are indicated by black triangles in the Owner’s Manual. Up or down is shown as "▲" or "▼", and left or right is shown as "◄" or "►".**
1. Set the Power switch to "Power on".
2. Set the Mode dial to "Auto mode".

- **Focal range**
  - Wide-angle: approx. 90 cm (3.0 ft.) to infinity
  - Telephoto: approx. 2.0 m (6.6 ft.) to infinity

- Use Macro mode for subjects closer than 90 cm (3.0 ft.)
- When "CARD ERROR", "CARD NOT INITIALIZED", "CARD FULL" or "NO CARD" appears, see P.111.

3. Unlock the Focus mode selector lock switch.
4. Press the Focus mode selector button to set the Focus mode to "S-AF".

5. Press the Flash pop-up button to pop up the flash.

- When the flash pops up, the image may disappear and go dark briefly due to flash charging. The indicator lamp blinks orange during charging.
- If the flash is used in dusty conditions or when it is snowing, white dots may appear in the image. This is due to the flash reflecting off the dust particles or snowflakes. Use Suppressed flash mode to fix the problem.

6. Brace your elbows against your sides and hold the camera with both hands. Position your right thumb so that it is handy for using the zoom.

7. Hold the camera so that your fingers or the strap do not cover the lens, flash, AF-assist illuminator or flash control sensor. If the lens, flash, AF-assist illuminator or flash control sensor is obscured, the brightness (exposure) of your shot may be incorrect.

- Check that the lens is clean. If it is dirty, clean the lens as informed on P.107.

8. Press the "T" (telephoto) button to zoom in. Press the "W" (wide-angle) button to zoom out. A zoom bar appears on the screen.

- **Optical zoom focal length**
  - (35 mm camera equivalent) Approx. 37 mm to 370 mm
  - Max. zoom scale: 10x

- The zoom setting is retained even when the camera is turned off.

The EVF/LCD selection is retained even when the camera is off or the Mode dial setting is changed.
Frame the shot so that the subject fills the entire AF (Autofocus) frame.

When the subject is not in the AF frame, use AF/AE lock to take the picture (P.25).

Press the shutter button down halfway. When a short double-beep is heard, the camera focuses on your subject. The AF frame on the screen becomes smaller and the camera sets the shutter speed and aperture. The indicator lamp (green) changes from blinking to lit.

The image shown on the screen before the picture is taken may differ in brightness, color, etc. from the image actually recorded. Play back the recorded image to check it (P.27).

Pressing the shutter button down halfway freezes the image on the screen briefly. This image is not the recorded image.

If "1AF" appears on the screen (e.g. the shot is too dark for the camera to focus), try standing about 2 m (6.6 ft.) from the subject to take the picture.

Before the flash fires, "FU appears on the screen.

Press the shutter button down fully. When a clicking noise is heard, the camera records the image.

There is a slight delay between the shutter button being pressed and the picture being taken. Playback the shot to check the image.

When pressing the shutter button down fully in one motion, the picture is taken without the AF frame changing.

When the camera takes the picture, the indicator lamp lights orange (shooting disabled). The indicator lamp then turns green and the next picture can be taken.

The indicator lamp blinks orange while the flash is charging. The screen may go dark briefly. This is normal.

See P.111-112 for information on the warning displays.

Subjects not suitable for autofocus

The FinePix S5100/FinePix S5500 uses a high-precision autofocusing mechanism. However, it may have difficulty focusing on the following:

- Very shiny subjects such as a mirror or car body
- Subjects photographed through glass
- Subjects that do not reflect well, such as hair or fur
- Subjects with little or no contrast between the subject and the background (such as white walls or subjects dressed in the same color as the background)
- Shots where another high-contrast object (not the subject) is close to the AF frame and is either closer or further away than your subject (such as a shot of someone against a background with strongly contrasting elements)

For such subjects use AF/AE lock (P.25).
**AF-ASSIST ILLUMINATOR**

Press the shutter button down halfway in dimly lit conditions. The camera fires the AF-assist Illuminator (green) to allow easier focusing at shooting distances up to roughly 2 m depending on subject. However, the AF-assist Illuminator is not effective when the zoom is set to telephoto (high magnification: 6× or more). Wherever possible, use a wide-angle zoom setting (low magnification) to take pictures.

When "AF" appears on the screen even with the AF-assist Illuminator used, the camera cannot focus. Try standing about 2 m (6.6 ft.) from the subject to take the picture.

**NUMBER OF AVAILABLE FRAMES**

The number of available frames appears on the screen.

See P.50 for information on changing the quality setting. The default quality "N" set at shipment is "N".

---

**Standard number of frames per xD-Picture Card**

The table below shows the standard number of frames for a new xD-Picture Card formatted on the camera. The larger the xD-Picture Card capacity, the bigger the difference between the actual number of frames and the number shown here. Also, the size of an image file varies depending on the subject. So the number of remaining shots may decrease by 2 or may remain the same. For this reason, the number displayed may not show the actual number of frames.

---

**USING AF/AE LOCK**

In this shot, the subjects (two people in this case) are not in the AF frame. Taking the picture at this point will result in the subjects being out of focus.

1. Move the camera slightly so that one of the subjects is in the AF frame.

2. Press the shutter button down halfway (AF/AE lock). When a short double-beep is heard, the camera focuses on your subject. The AF frame on the screen becomes smaller and the camera sets the shutter speed and aperture. The indicator lamp (green) changes from blinking to lit.

3. Continue to hold the shutter button down halfway. Move the camera back to the original image and press the shutter button fully.

4. AF/AE lock can be applied repeatedly before the shutter is released. Use AF/AE lock in all Photography modes to guarantee excellent results.

**AF (Autofocus)/AE (Auto-exposure) lock**

On the FinePix S5100/FinePix S5500, pressing the shutter button down halfway locks the focus and exposure settings (AF/AE lock). To focus on a subject that is off to one side or to set the exposure before composing the final shot, lock the AF and AE settings. Then compose and take the picture to get the best results.
USING THE ZOOM (OPTICAL ZOOM / DIGITAL ZOOM)

Press the Zoom buttons to zoom in and out. The digital zoom can be used with the "2", "1" and "x" quality settings. When zooming changes between optical and digital, the position of the "■" indicator stops. Press the same Zoom button again to start the "■" indicator moving again.

The digital zoom cannot be used with the "x" quality setting.

See P.50 for information on changing the quality setting.

If the shot goes out of focus during zooming, hold the shutter button down halfway to refocus the shot.

† Optical zoom focal length
Approx. 37 mm-370 mm, max. zoom scale: 10×

† Digital zoom focal lengths
2: approx. 370 mm-525 mm, max. zoom scale: approx. 1.4×
1: approx. 370 mm-659 mm, max. zoom scale: approx. 1.8×
0: approx. 370 mm-1314 mm, max. zoom scale: approx. 3.6×
* 35 mm camera equivalents

BEST FRAMING

Select the framing guideline in the Photography mode. Pressing the "DISP/BACK" button changes the screen display. Press the "DISP/BACK" button until "Framing Guideline" appears.

Important
Always use AF/AE lock when composing a shot. The image may be out of focus if AF/AE lock is not used.

Scene
Position the main subject at the intersection of two lines in this frame or align one of the horizontal lines with the horizon. Use this frame as a guide to the subject’s size and the balance of the shot while composing a shot.

The framing guideline is not recorded on the image.

The lines in the scene frame divide the image into 3 roughly equal parts horizontally and vertically. The resulting printed image may be shifted slightly from the scene frame.

This camera will display still images recorded on the FinePix S5100/FinePix S5500 or still images (excluding some uncompressed images) recorded on any FUJIFILM digital camera that supports xD-Picture Cards.

Clear playback or playback zooming may not be possible for still images shot on cameras other than the FinePix S5100/FinePix S5500.
PLAYBACK MODE | VIEWING THE IMAGES (PLAYBACK)

Playback zoom
Press the Zoom button during single-frame playback to zoom (enlarge) the still image. A zoom bar appears.

Press the “DISP/BACK” button to cancel playback zoom.
Playback zoom cannot be used with multi-frame playback.

Press ‘↑’, ‘↓’, ‘←’ or ‘→’ to display another part of the image.
The current displayed image appears on the navigation screen.

PLAYBACK MODE | ERASING IMAGES (ERASE FRAME)

1

Set the Power switch to “PLAY”.

2

① Press the “MENU/OK” button during playback to display the menu on the screen.
② Press “◄” or “►” to select “ERASE.”

3

① Press “▲” or “▼” to select “FRAME”.
② Press the “MENU/OK” button to confirm the selection.
See P.61 for information on “ALL FRAMES”.

4

① Press “◄” or “►” to select the frame (file) to be erased.
② Press the “MENU/OK” button to erase the displayed frame (file).
To erase another image, repeat steps ① and ②.
Press the “DISP/BACK” button to cancel single frame erasing.

Erased frames (files) cannot be recovered. Back up important frames (files) onto your PC or another media.

● Press the “DISP/BACK” button to cancel playback zoom.

● Press the “DISP/BACK” button repeatedly to erase consecutive image. Take care not to erase important images.
FOCUSING (DISTANCE)

The distance from the subject to the camera is referred to as the shooting distance. When the shooting distance is set correctly and the image appears sharp, the image is focused.

Three focusing methods

There are mechanisms for focusing: (1) Single AF (S-AF); (2) Continuous AF (C-AF); and (3) Manual focus (MF).

S-AF: In this mode, the camera focuses each time the shutter button is pressed down halfway.

C-AF: When this mode is set, the camera focuses continuously on the subject in the center of the screen. Use this mode to photograph moving subjects. See P.47 for details.

MF: With the “T” button held down, press the “T” or “W” button to focus the shot. See P.48 for details.

Causes of focusing errors and the solutions

<table>
<thead>
<tr>
<th>Cause</th>
<th>Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>The subject is not suited to AF.</td>
<td>Use AF lock (AF mode: AF (CENTER))#1 or MF.</td>
</tr>
<tr>
<td>The subject is outside the shooting range.</td>
<td>Turn Macro mode on or off.#2</td>
</tr>
<tr>
<td>The subject is moving too quickly.</td>
<td>Use MF (pre-setting the shooting distance for a shot).</td>
</tr>
</tbody>
</table>

1 Taking pictures using AF lock

Press the shutter button down halfway to focus.

Capture the subject

Recompose the shot and take the picture.

2 Turning Macro mode ON/OFF

Approx. 90 cm (3.0 ft.) to infinity (fixed at wide)

Macro OFF

Approx. 10 cm to 2.0 m (3.9 in. to 6.6 ft.) (fixed at wide)

Macro ON

Subjects not suitable for autofocus

- Very shiny subjects such as a mirror or car body
- Subjects photographed through glass
- Subjects that do not reflect well, such as hair or fur
- Subjects with no substance, such as smoke or flames
- Dark subjects
- Fast moving subjects

- Subjects with little or no contrast between the subject and the background (such as white walls or subjects dressed in the same color as the background)
- Shots where another high-contrast object (not the subject) is close to the AF frame and is either closer or further away than your subject (such as a shot of someone against a background with strongly contrasting elements)

PHOTOGRAPHY FUNCTIONS

Exposure (Shutter Speed and Aperture)

Exposure refers to the light that hits the CCD or the total amount of captured light and determines the brightness of the image. The exposure is determined by the combination of aperture and shutter speed. In AE (Auto-exposure), the camera determines the correct exposure, allowing for factors such as the brightness of the subject and the sensitivity setting.

The graph at left shows the way the aperture and shutter speed settings can be changed while maintaining the same exposure level.

- When the aperture is decreased by one step, the shutter speed also decreases by one step (the dot moves upper left).
- When the aperture is increased by one step, the shutter speed also increases by one step (the dot moves lower right).
- Combinations that result in the shutter speed or aperture being outside the available range of settings cannot be selected (white dots).
- In the “P,” “S” and “A” Photography modes, it is easy to select different settings along this line.
- Selecting settings that run parallel to this line by adjusting the brightness of the photographed image is referred to as exposure compensation.

When you cannot get the correct exposure

Exposure compensation:

This function uses the exposure level set by the AE function as a reference (0) and then brightens (+) or darkens (-) the image. By selecting Auto bracketing, you can shoot 3 frames, one underexposed (-), one at the reference exposure (0) and one overexposed (+).

Shutter speed

When shooting a moving subject, you can either “freeze the motion” or “capture the sense of movement” by adjusting the shutter speed.

Fast

Freezes the motion of the subject.

Slow

Photographs the traces left by the subject’s movement.

Aperture

By adjusting the aperture, you can change the depth of focus (depth of field).

Closed

The area in front of and behind the subject is also in focus.

Open

The background is out of focus.
Consider the scene you are photographing and the sort of image you want to achieve when you specify the camera settings. A general guide is given below.

1. **Select the Photography mode (P.34-38, 75-76).**
   - **AUTO**
     - Specifies all settings other than the Quality, Sensitivity and FinePix COLOR on the camera.
   - **P/S/A**
     - Selects the best Scene position setting for the scene being shot.
   - **M**
     - Changes the aperture or shutter speed setting so that the action is frozen, the flow of the motion is conveyed, or the background is out of focus.
     - Adjust all the camera settings yourself.
     - Record a movie.

2. **Specify the photography settings (P.39-49).**
   - **Macro**
     - Uses for close-up shots.
   - **Flash**
     - Uses for shots in dark locations or for backlit subjects, etc.
   - **Continuous shooting**
     - Uses to take a series of continuous shots or to use auto bracketing (with exposure compensation).
   - **Exposure compensation**
     - Use exposure compensation.

3. **Take the pictures (check the exposure and focus ➡ adjust the shot composition ➡ press the shutter button down fully).**

-----

**The table below provides a number of sample settings. Use the settings effectively.**

**1.** To achieve this result | Sample settings
---|---
To express the motion of the subject | Set the Mode dial to “S” and select a slow shutter speed. (Use a tripod to prevent camera shake.)
To freeze the subject’s movement | Set the Mode dial to “S” and select a fast shutter speed.
To make the subject stand out by having the background out of focus | Set the Mode dial to “A” and select a wide aperture setting.
To get a very large depth of focus | Set the Mode dial to “A” and select a narrow aperture setting.
To prevent the image from having a red or blue cast due to the light source | Change the “White balance” setting in the photography menu.
To prevent missing snapshot opportunities | Take pictures in AUTO mode (see “Using the Camera”).
To prevent the subject from being overexposed or underexposed and to show the substance and textures of the subject clearly. | Use exposure compensation.
Select (+) if the background is pale and (-) if the background is dark.

When shutter speed and aperture adjustments alone do not give the correct exposure:

- **When the image is too bright**
  - Lower the “ISO” sensitivity setting.
- **When the image is too dark**
  - Raise the “ISO” sensitivity setting.
  - Use flash or the brightness adjustment function.
Set the Mode dial to "N". This is an automatic mode to specify the settings except for the shutter speed and aperture setting. This is a simple way to take pictures the same as the Shutter-priority Auto and Aperture-priority Auto modes (Program shift).

**Program shift**

Press "A" or "V" to select different shutter speed and aperture setting combinations without changing the exposure setting. The shutter speed and aperture setting appear in yellow when the camera is in Program shift mode.

- Changing the Mode dial setting
- Popping the flash up
- Setting the camera to Playback mode
- Turning the camera off

When the brightness of the subject is outside the camera's brightness metering range, "---" appears as the shutter speed and aperture setting on the screen.
Set the Mode dial to “S”.
This is an automatic mode to set the shutter speed.
Use this mode to freeze a moving subject (fast shutter speed) or convey the impression of movement (slow shutter speed).

Setting the shutter speed
Press “△” or “▼” to select the shutter speed.
• Shutter speed setting
3 sec. to 1/1000 sec. in 1/3 EV increments

◆ The shutter speed and aperture setting display ◆
In scenes that are extremely overexposed, the aperture setting (F8) appears in red. When this occurs, select a faster shutter speed (up to 1/1000 sec.).

In scenes that are extremely underexposed, the aperture setting (F2.8) appears in red. When this occurs, select a slower shutter speed (down to 3 sec.).

When the brightness of the subject is outside the camera’s brightness metering range, “F---” appears as the aperture setting. When this occurs, press the shutter button down halfway to measure the light level again and display a value.

◆ The shutter speed and aperture setting display ◆
In scenes that are extremely overexposed, the shutter speed setting appears in red. When this occurs, select a larger number of aperture.

In scenes that are extremely underexposed, the shutter speed setting appears in red. When this occurs, select a smaller number of aperture.

◆ The shutter speed and aperture setting display ◆
When Forced flash mode is selected, the slowest available shutter speed is 1/60 sec.

When the brightness of the subject is outside the camera’s brightness metering range, “F---" appears as the shutter speed setting. When this occurs, press the shutter button down halfway to measure the light level again and display a value.
When using the flash in Macro mode, remove the lens adapter ring. If the adapter ring is not removed, a shadow may appear in the bottom center of your shot.
**Advanced Features**

#### 41

**Available Photography modes:**

**PHOTOGRAPHY FUNCTIONS**

**FLASH**

Choose from 5 flash modes according to the type of shot.

1. Set the Power switch to "a".

2. Set the Mode dial to "auto", "u", "r", "p", "s", "a" or "m" mode.

3. Press the Flash pop-up button to pop-up the flash.
   - **Effective flash range**
     - Wide-angle: approx. 30 cm to 5.0 m (1.0 ft. to 13.8 ft.)
     - Telephoto: approx. 80 cm to 4.5 m (2.6 ft. to 12.5 ft.)

   - If the shutter speed is set to a speed faster than 1/1000 sec., the image may appear dark even if the flash is used.
   - When the flash pops up, the image may disappear and go dark briefly due to flash charging. The indicator lamp blinks orange during charging.

4. **Suppressed flash**

   Pressing the flash down changes the camera to Suppressed flash mode.
   Use this mode for taking pictures using indoor lighting, for shots taken through glass, and for photography in places such as theaters or at indoor sporting events where the distance is too great for the flash to be effective. When you use Suppressed flash, the selected white balance function (P.53) operates so that natural colors are captured along with the ambience of the available light.
   - Use a tripod to prevent camera shake, particularly for shots in the dark when the selected flash mode is Suppressed flash.
   - See P.23, 111 for information on the camera shake warning.

#### 40

**4 Flash buttons**

- **Auto flash**
  - Use this mode for ordinary photography. The flash fires as required by the shooting conditions.
  - If pressing the shutter button while the flash is charging, the picture will be taken without the flash.
  - **Red-eye reduction**
    - Use this mode to make sure that the subject’s eyes appear normal when taking pictures of people in low-light conditions. The flash fires a pre-flash just before the picture is taken and then fires again to take the actual picture. The flash fires as required by the shooting conditions.
    - If pressing the shutter button while the flash is charging, the picture will be taken without the flash.

#### 3

**Available Photography modes**

- The flash setting changes each time you press the "flash" button.
- If the flash is used in dusty conditions or when it is snowing, white dots may appear in the image due to flash reflecting off the dust particles or snowflakes. Use Suppressed flash mode.
- When taking a picture using the flash, the image may disappear and go dark briefly due to flash charging. The indicator lamp blinks orange during charging.

- The available flash modes are limited depending on the Photography menu selected (P.33).

---

**Continued**

41

"Continued"

41
**FLASH**

### Forced flash

Use this mode in backlit scenes, such as a subject against a window or in the shade of a tree, or to get the correct colors when taking a picture under bright lighting. In this mode, the flash fires in bright as well as dark conditions.

### Slow synchro

This is a flash mode that uses a slow shutter speed. This allows you to take pictures of people at night that clearly show both your subjects and the night time backdrop. To prevent camera shake, always use a tripod.

- **Slowest shutter speed**
  - “L” Night scene: up to 3 sec.

### Red-eye reduction + Slow synchro

Use this mode for Slow synchro shots with Red-eye reduction.

* The image may be overexposed when shooting bright scenes.

To take a picture of a main subject at night with the background brightly lit, use the “L” (Night scene) setting ([P.34]).

---

### Continuous shooting

**CONTINUOUS SHOOTING**

1. Set the Power switch to “M”.

2. **Hold down the “f” button.**
   - Press “<” or “>” to select the Continuous shooting mode.
   - Release the “f” button to confirm your selection.

3. Setting the Continuous shooting mode (except for “OFF”), the selected mode appears on the screen.
   - “q”: Top 3-frame continuous shooting
   - “d”: Auto bracketing
   - “c”: Final 3-frame continuous shooting
   - “h”: Long-period continuous shooting

---

**Notes on using the Continuous shooting modes**

- Shooting continues as long as you hold down the shutter button. In auto bracketing mode however, just press the shutter button once to shoot 3 frames.
- If there is insufficient space on the xD-Picture Card, as many frames as can be recorded on the available space are shot. When auto bracketing, if there is insufficient space on the xD-Picture Card to record 3 frames, no pictures are taken.
- The focus is determined in the first frame and cannot be changed in mid-sequence.
- The exposure is determined in the first frame, but in Long-period continuous shooting the exposure is adjusted for the scene being shot.
- The speed of continuous shooting varies depending on the shutter speed.
- The speed of continuous shooting does not change with the quality setting.
- The flash cannot be used as the flash mode is set to Suppressed flash.
- For continuous shooting, final 3-frame continuous shooting and pictures taken using auto bracketing, the results are always displayed after you shoot. Note that pictures taken using Long-period continuous shooting are recorded without displaying the results.
**Photography Functions**

### CONTINUOUS SHOOTING

#### Top 3-frame continuous shooting

**Available Photography mode:**

This mode shoots up to 3 frames (Max. 3 frames/sec.). When taking the pictures, the images appear (in sequence from the left) and are recorded.

- The maximum file recording time using the continuous shooting is 3.3 seconds when recording in xD-Picture Card.

#### Auto bracketing

**Available Photography mode:**

This mode shoots the same image with different exposure settings. Bracketing shoots 3 continuous frames each with a different exposure setting. A is correctly exposed, B is overexposed and C is underexposed.

The settings (exposure range) can be changed in the photography menu.

- **Auto bracketing settings (3)**
  - ±1/3 EV, ±2/3 EV, ±1 EV
  - If the underexposed or overexposed frame is outside the camera's control range, the picture is not taken with the specified setting increments.
  - Auto bracketing cannot be used in "B", "N", "M", "<", ">", "/", "/", "r" mode.

**Changing the setting (exposure range)**

Press the "MENU/OK" button to display the menu and change the setting in the "j BRACKETING" menu option (P. 59).

#### Final 3-frame continuous shooting

**Available Photography mode:**

This mode allows you to release the shutter up to 40 times (Max. 3 frames/sec.) and record the last 3 frames. If you take your finger off the shutter button before 40 shots have been taken, the camera records the final 3 frames shot before you released the shutter button.

If there is insufficient space on the xD-Picture Card, the camera records as many of the shots taken just before the shutter button was released as will fit on the xD-Picture Card.

### Long-period continuous shooting

**Available Photography mode:**

This mode allows you to take up to 40 continuous shots (Max. 1.6 frames/sec.).

- Long-period continuous shooting cannot be used in the "B", "N", "M", "<", ">", "/", "/", "r" modes.

**Focusing on a moving subject**

If you press the shutter button down halfway to focus on the subject at the starting point A, the subject may no longer be in focus when it reaches point B where you want to take the shot.

In such situations, focus on point B beforehand and then lock the focus so that it does not shift.

This feature is also useful for photographing fast-moving subjects that are difficult to focus on.

**Flash**

When a Continuous shooting mode is selected, the flash mode is forcibly set to "v" Suppressed flash.

However, when the mode is changed back to normal photography, the flash setting specified before continuous shooting was selected is restored.
**PHOTOGRAPHY FUNCTIONS**

**EXPOSURE COMPENSATION**

Use this function for shots to get the correct brightness (exposure), such as shots with extremely high contrast between the subject and the background.

1. Set the Power switch to "Q".
2. Set the Mode dial to "P", "S" or "A" mode.

- **To obtain the optimum brightness**
  Adjust the exposure compensation according to the level of brightness or darkness in the image.
  - When the subject appears too bright
    - Try a negative (−) compensation setting. This will make the overall image darker.
  - When the subject appears too dark
    - Try a positive (+) compensation setting. This will make the overall image brighter.
  - **Guide to compensation**
    - Backlit portraits: +2 steps to +4 steps (+2 EV to +1 1/2 EV)
    - Very bright scenes (such as snowfields) and highly reflective subjects: +3 steps (+1 EV)
    - Shots made up predominantly of sky: +3 steps (+1 EV)
    - Spotlight subjects, particularly against dark backgrounds: −2 steps (−3/2 EV)
    - Scenes with low reflectivity, such as shots of pine trees or dark foliage: −2 steps (−3/2 EV)

- **Compensation range**
  −2 EV to +2 EV (13 steps in 1/3 EV increments)

- Exposure compensation cannot be used in the "M", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "", "”,}
To set the focus manually, use this function after adjusting the focus automatically with “S-AF” auto focus mode.

1. Set the Power switch to “Ⅰ”.

   Manual focus cannot be used in the “Ⅱ” Movie mode.

3. Unlock the Focus mode selector lock switch.
   ① Press the Focus mode selector button to set the Focus mode to “S-AF”, focus on the subject and press the shutter button halfway. The camera is then focused on the subject.
   ② Press the Focus mode selector button to set the Focus mode to “MF”. The focusing position is locked on the subject.

4. Hold down the “D” button.
   ① Press the “T” or “W” button to adjust the focus.
   Use the screen to check the focus.
   - T: Moves the focus further.
   - W: Moves the focus closer.

   Mastering manual focusing

   The image is unfocused when the camera moves.
   Use a tripod to avoid camera shake.

This is useful when checking the shot composition for dimly lit scenes (Slow synchro shots, etc.).

1. Set the Power switch to “Ⅰ”.

3. Press the “fi” Low light viewfinder button. “fi” appears on the screen and the subject is displayed brightly.
   To cancel increased brightness: Press the “fi” Low light viewfinder button again.
   This function is automatically cancelled after each shot.
   - This function is purely for checking the composition of your shot. It does not increase the brightness of the photographed image.
   - Even if you increase the brightness in dark locations, you may not see the subject.
   - To maintain the monitor brightness, specify the desired setting in the “EVF/LCD” (LCD monitor brightness) adjustment in the settings menu. The adjustment is retained even after taking pictures or turning camera off. See P.79 for details.
1. Set the Power switch to "q".
2. Set the Mode dial to "B", "m", "", "", "/", "N", "M", "<" or ">" mode.
3. Press the "p" button.

● In "r" Movie mode, do not set the "S" (sensitivity) setting.

1. Press "d" or "c" to select the "y" quality setting and then press "A" or "B" to change the setting.
2. Press the "MENU/OK" button to confirm the setting.

● The numbers to the right of each setting show the number of available frames.

When changing the quality setting, the number of available frames also changes (P.24).

Quality settings in Photography mode

<table>
<thead>
<tr>
<th>Quality mode</th>

<td>To use for e-mail or web site</td>
</tr>
</tbody>
</table>
1. Set the Power switch to "Q".
3. Press the "F" button.

- In "Q" Movie mode, do not set the "F" FinePix COLOR setting.
- The FinePix COLOR setting is retained even when the camera is off or the Mode setting is changed.

2. Press "▲" or "▼" to select the "F" FinePix COLOR setting and then press "▲" or "▼" to change the setting.
2. Press the "MENU/OK" button to confirm the setting.
- F-CHROME may have little visible effect with some subjects, such as close-up shots of people (portraits).
- Because the effects on the image differ depending on the scene being shot in F-CHROME mode, take pictures in standard mode as well as this mode. Note that you may not be able to see any difference on the screen.
- For shots taken in F-CHROME mode or F-B&W mode, automatic quality adjustment will be suppressed on Exif Print compliant printers.

3. When setting F-CHROME or F-B&W, the icon appears on the screen.
- F-CHROME:
- F-B&W:

When setting F-CHROME or F-B&W, the icon appears on the screen.

- **F-STANDARD**
  - The contrast and color saturation are set to standard. Use this mode for normal photography.
- **F-CHROME**
  - The contrast and color saturation are set to high. This feature is effective for taking more vivid shots of subjects such as scenery (blue sky and greenery) and flowers.
- **F-B&W**
  - This setting converts the colors in the photographed image to black and white.

- **Self-timer** ➡ P.54
  - Use this setting for taking pictures such as group shots where the photographer is included in the shot.

- **Bracketing** ➡ P.59
  - Use this setting to photograph the same image with different exposure settings.

- **White balance** ➡ P.55
  - Change the white balance setting to take a picture with the white balance fixed for the surroundings and lighting.

- **AF Mode** ➡ P.57
  - Set the focusing method.

- **Flash brightness adjustment** ➡ P.59
  - Change this setting to adjust the amount of light emitted by the flash to suit the photography conditions or to achieve a desired effect.

- **Photometry** ➡ P.58
  - Use this setting for scenes where the brightness of the subject and background differ markedly so that the MULTI setting is unlikely to achieve the desired results.
Advanced Features

**SELF-TIMER PHOTOGRAPHY**

The self-timer is used in situations where the photographer is included in the shot. When selecting the self-timer setting, the self-timer icon appears on the screen.

- **①** The picture is taken after 2 seconds.
- **②** The picture is taken after 10 seconds.

Any of the following cancels the self-timer setting:
- Completing the shooting
- Changing the Mode dial setting
- Setting the camera to Playback mode
- Turning the camera off

**Using the 2-second self-timer**

This is useful when you have the camera on a tripod and you want to prevent camera shake.

1. Position the AF frame over the subject.
2. Press the shutter button down halfway to focus on the subject.
3. Without releasing the shutter button, press the button all the way down (fully pressed) to start the self-timer.

The AF/AE lock can be also used (P.25).

Take care not to stand in front of the lens when pressing the shutter button as this can prevent the correct focus or brightness (exposure) from being achieved.

The self-timer lamp lights and then starts blinking until the picture is taken.

To stop the self-timer, once it has started running, press the “DISP/BACK” button.

A countdown appears on the screen indicating the time remaining until the picture is taken. Self-timer mode is cancelled after each shot.

**WHITE BALANCE**

Available Photography mode:

Change the white balance setting to take a picture with the white balance fixed for the surroundings and lighting.

In AUTO mode, the correct white balance may not be achieved for subjects such as close-ups of people’s faces and pictures taken under a special light source. Select the correct white balance for the light source. See P.117 for more information on the white balance.

**Available Photography mode:**

- **①** AUTO: Automatic adjustment (shooting to show the ambience of the light source)
- **②** : Custom white balance
- **③** : Shooting outdoors in good weather
- **④** : Shooting in shade
- **⑤** : Shooting under “Daylight” fluorescent lamps
- **⑥** : Shooting under “Warm White” fluorescent lamps
- **⑦** : Shooting under “Cool White” fluorescent lamps
- **⑧** : Shooting in incandescent light

- When the flash fires, the white balance setting (excluding custom white balance) for the flash is used. Consequently, to achieve a particular effect, the flash mode should be set to Suppressed flash (P.40).

The color tones may vary depending on the shooting conditions (light source, etc.).

**Custom white balance**

Use this setting to set the white balance for the ambient natural or artificial lighting in images. Use this setting to achieve special effects also.

1. Select **②** Custom white balance.
2. Press the “MENU/OK” button.

Hold a piece of white paper under the light source you are setting the white balance for, so that it fills the entire screen. Then press the shutter button to set the white balance.

The white balance setting does not affect the image shown on the screen.

To use the white balance set previously, press the “MENU/OK” button without pressing the shutter button.

Continued
When the correct exposure is measured, “COMPLETED” appears. Press the “MENU/OK” button to confirm the setting.

The specified custom white balance is retained until it is reset. This setting is retained even if the batteries are removed.

After taking the picture, check the “Color (White balance)” setting for the image.
• Set the Power switch to “W” (P.27).

When “OVER” or “UNDER” appears, the white balance was not measured at the correct exposure. Set the exposure compensation again, using a negative value (–) when “OVER” appears and a positive value (+) when “UNDER” appears.

You can change the white balance for a photographed image by using colored paper instead of white paper.

Example
You can change the white balance for a photographed image by using colored paper instead of white paper.

AF MODE
Available Photography mode:

AREA
CENTER
MULTI

CENTER
The camera focuses on the center of the screen. Use this setting when taking pictures using AF/AE lock (P.25).

The AF mode can only be selected when the focus mode is S-AF (P.20).

MULTI
Press the shutter button down halfway. The camera recognizes any strongly contrasting subject near the center of the screen and displays the AF frame over the subject in focus.
• When taking pictures in Macro mode, the camera focuses on the center of the screen.

You cannot check the focus when taking pictures using the viewfinder. After taking the picture, play it back to check the focus.

For a high-contrast subject in the center of the screen
Press the shutter button down halfway. The AF frame appears positioned on the high-contrast subject near the center of the image.

When there is no high-contrast subject in the center of the screen
When the camera has difficulty focusing on the subject in MULTI mode, set the AF mode to CENTER and use AF/AE Lock (P.25).
This mode is particularly effective for shots of people wearing black or white clothing and shots of scenery. The advantage of this mode is that the exposure tends not to change for different compositions or subjects.

In this mode, the camera uses automatic scene recognition to analyze the subject and provide optimum photometry where an average value for the entire image is used. Depending on the type of subject and the shooting distance, brightness adjustment may have no effect.

The camera changes the focusing position on the screen. Use this setting when composing the shot using a tripod and changing the focusing position. Press "△", "▼", "◄", or ► to move the "●" (target point) to the focusing position.

The AF frame appears in the location to which the target point was moved. Take the picture in the normal way. To reposition the AF frame, select "AREA" from the "AF MODE" menu.

Regardless of the AF frame location, the exposure is always set using the area in the center of the screen. To expose the shot for your main subject, use AE lock.

Use this setting for scenes where the brightness of the subject and background differ markedly so that the MULTI setting is unlikely to achieve the desired result.

Light metering where the camera assesses the scene and selects the optimum exposure.

Light metering where the exposure is optimized for the center of the image.

Light metering where an average value for the entire image is used.

In the "AVERAGE", "", "A", "", "E", and "D" modes, light metering is fixed at the MULTI setting and cannot be changed.

The photometry modes are effective for the following subjects:

- **MULTI**
  - In this mode, the camera uses automatic scene recognition to analyze the subject and provide optimum exposure in a wide range of shooting conditions. This mode should be used for everyday photography.

- **SPOT**
  - This mode is useful for subjects with strongly contrasting light and dark areas where you want to achieve the correct exposure for a particular feature.

The advantage of this mode is that the exposure tends not to change for different compositions or subjects. This mode is particularly effective for shots of people wearing black or white clothing and shots of scenery.

Use this setting to photograph the same image with different exposure settings. Bracketing shoots 3 continuous frames, one of which is correctly exposed while the remaining two are underexposed and overexposed respectively by a set amount.

- **Bracketing settings**
  - ±1/3 EV, ±2/3 EV, ±1 EV
  - See P.117 for more information on EVs.

- Flash photography cannot be used.

- This feature always takes 3 shots. However, if there is insufficient space on the SD-Picture Card for 3 shots, no picture will be taken.

Use this setting to change the amount of light emitted by the flash to suit the photography conditions or to achieve a desired effect.

- **Compensation range**: ±2 levels
  - -2/3 EV to +2/3 EV in approx. 1/3 EV increments
  - ±2 levels selectable
  - See P.117 for more information on EVs.

- If the underexposed or overexposed frame is outside the camera's control range, the shot is not taken with the specified setting increments.

- Flash photography cannot be used.

- The image may appear dark when the shutter speed is set to speeds higher than 1/1000 sec.
Use this function to check the photography information. Hold down the “D” button to check the information.

This function cannot be used during multi-frame playback (P.27).

Histograms
A histogram is a chart showing the distribution of brightness in an image (horizontal axis: brightness; vertical axis: pixels).

1. Optimal exposure: There is an ample distribution of pixels overall with a peak in the middle range.
2. Overexposed: The number of highlight pixels is high with the distribution sloping upwards to the right.
3. Underexposed: The number of shadow pixels is high with the distribution sloping upwards to the left.

The shape of the graph will vary depending on the subject.

1. Set the Power switch to “E”.
2. Press the “MENU/OK” button to display the menu on the screen.

Erased frames (files) cannot be recovered. Back up important frames (files) onto your PC or another media.

Press “<” or “>” to select “ERASE”.

ALL FRAMES
Erases all unprotected frames (files).
Back up important frames (files) onto your PC or another media.
FRAME
Erases only the selected frame (file).
BACK
Returns to playback without erasing any frames (files).

1. Press “▲” or “▼” to select “ALL FRAMES” or “FRAME”.
2. Press the “MENU/OK” button.
PLAYBACK MENU

### ERASING SINGLE / ALL FRAMES

#### FRAME

1. Press “↑” or “↓” to select the frame (file) to be erased.
2. Press the “MENU/OK” button to erase the currently displayed frame (file).

To erase another frame (file), repeat steps 1 and 2. When you have finished erasing frames (files), press the “DISP/BACK” button.

- Pressing the “MENU/OK” button repeatedly erases consecutive frames (files). Take care not to erase a frame (file) by mistake.
- Protected frames (files) cannot be erased. Unprotect the frames (files) before erasing them (P.63).

#### ALL FRAMES

Pressing the “MENU/OK” button erases all the frames (files).

- Protected frames (files) cannot be erased. Unprotect the frames (files) before erasing them (P.63).

If “* DPOF SPECIFIED ERASE OK” or “* DPOF SPECIFIED ERASE ALL OK” appears, press the “MENU/OK” button again to erase the frames (files).

- To stop the procedure midway
  - Press the “DISP/BACK” button to cancel erasing of all the frames (files). Some unprotected frames (files) will be left unerased.
  - Even if you stop the procedure immediately, some frames (files) will be erased.

### PROTECTING IMAGES: FRAME / SET ALL / RESET ALL

#### FRAME

1. Set the Power switch to “
2. Press the “MENU/OK” button to display the menu on the screen.

- Protection is a setting that prevents frames (files) from being accidentally erased. However, the “FORMAT” function erases all the frames (files), including protected frames (files) (P.82).

#### SET ALL

Press “↑” or “↓” to select “SET ALL”.

- Protects all the frames (files).

#### RESET ALL

- Removes the protection from all the frames (files).

#### FRAME SET

1. Press “A” or “V” to select “FRAME”, “SET ALL” or “RESET ALL”.
2. Press “MENU/OK” button to confirm your selection.

#### FRAME

1. Press “A” or “V” to select the frame (file) to be protected.
2. Press the “MENU/OK” button to protect the frame (file) currently displayed.

To protect another frame (file), repeat steps 1 and 2. When you have finished protecting frames (files), press the “DISP/BACK” button.

### To stop the procedure midway

- Press the “DISP/BACK” button to cancel erasing of all the frames (files). Some unprotected frames (files) will be left unerased.

- Even if you stop the procedure immediately, some frames (files) will be erased.

---

Continued
1. Press "d" or "c" to select "g" PLAYBACK.

2. Press the "MENU/OK" button to display the menu on the screen.

   - The Power save function does not operate during playback.
   - Movies start automatically. When the movie ends, the playback function moves it on.

3. Press "<" or ">" to select "g" PLAYBACK.

4. Press the "DISP/BACK" button once during playback to display the playback frame number and on-screen help.

   - Press "<" or ">>" to advance or go back through the images.

---

**FRAME RESET**

1. Press "<" or ">" to select the protected frame (file).
2. Press the “MENU/OK” button to unprotect the displayed frame (file).

**SET ALL**

Press the “MENU/OK” button to protect all the frames (files).

**RESET ALL**

Press the “MENU/OK” button to unprotect all the frames (files).

---

To stop the procedure midway

If the images are very large, protecting or unprotecting all the frames (files) may take some time. If you want to take a picture or record a movie during the procedure, press the “DISP/BACK” button. To return to protecting or unprotecting all the frames (files), see the procedure on P.63 and begin at step 1.
Voice memos can be added to still images.

1. Audio recording format: WAVE (P.117)  
   PCM recording format
2. Audio file size: approx. 480 KB  
   (for a 30-second voice memo)

① Set the Power switch to “
② Press “ ” or “ ” to select the image (still image) to add a voice memo.
③ Press the “MENU/OK” button.

① Press the “MENU/OK” button to display the menu on the screen.
② Press “ ” or “ ” to select “ ” VOICE MEMO.
③ Press the “MENU/OK” button.

Voice memos cannot be added to movies.
When “PROTECTED FRAME” appears, unprotect the frame.

After 30 seconds of recording, “ ” appears on the screen.
To finish: Press the “MENU/OK” button.
To re-record your comment:
Press the “DISP/BACK” button.

If you select an image that already has a voice memo, a screen appears in which you can select whether to re-record the memo.

When the image already has a voice memo

Voice memos cannot be added to movies.
When “PROTECTED FRAME” appears, unprotect the frame.

The remaining recording time appears during recording and the self-timer lamp blinks.
When the time remaining reaches 5 seconds, the self-timer lamp starts blinking quickly.

To end your comment during recording, press the “MENU/OK” button.
PLAYBACK MENU  PLAYING BACK VOICE MEMOS

1. Set the Power switch to “w”.
2. Press “d” or “c” to select an image file that has a voice memo.

Voice memos cannot be played back using multi-frame playback. Press the “DISP/BACK” button twice to select single-frame playback.

Indicated by the “t” icon.

PLAYBACK MENU  TRIMMING

1. Set the Power switch to “w”.
2. Press “d” or “c” to select the trimming frame (file).

Press the “MENU/OK” button to display the menu on the screen.
2. Press “d” or “c” to select “Y” TRIMMING.
3. Press the “MENU/OK” button.

Press the “T” button or “W” button to zoom in (enlarge) or out on a still image. A zoom bar appears.

Press the “DISP/BACK” button to return to single-frame playback.

● Press “d” or “c” while voice memo playback is stopped to go back to the previous file or advance to the next file respectively.

Press “d” or “c” during playback to skip forwards or backwards through the voice memo.

These buttons do not function while playback is paused.

Press the “DISP/BACK” button to return to single-frame playback.

Press the “t” icon.

When the sound is difficult to hear, adjust the volume (P.79).

Take care not to block the speaker.

| Fast forward     | Press “d” or “c” during playback to skip forwards or backwards through the voice memo.  
These buttons do not function while playback is paused. |
| Fast reverse     | Fast reverse Fast forward |

Compatible voice memo files

You can use your FinePix S5100/FinePix S5500 to playback voice memos recorded on this camera or voice memos up to 30 seconds long recorded onto a xD-Picture Card using a FUJIFILM digital camera.
Check the saved image size and press the “MENU/OK” button. The trimmed image is added as a separate file in the final frame.

### Image sizes

| M | Printing at up to 4R (10.2 × 15.2 cm/4 × 6 in.) / All size |
| M | Printing at up to 3R (8.9 × 12.7 cm/3.5 × 5 in.) size |
| M | To use for e-mail or web site |

DPOF stands for Digital Print Order Format and refers to a format that is used for recording printing specifications for images shot using a digital camera on media such as an xD-Picture Card. The recorded specifications include information on which frames are to be printed.

This section gives a detailed description of how to order your prints with the FinePix S5100/FinePix S5500.

* Note that some printers do not support date and time imprinting or specification of the number of prints.

* Note that the warnings shown below may be displayed while you are specifying the prints.

- **DPOF SPECIFIED, ERASE OK?**
  - **DPOF SPECIFIED, ERASE ALL OK?** (P.62)
  When erasing the image, the DPOF setting for that image is deleted at the same time.

- **RESET DPOF OK?** (P.72)
  When inserting an xD-Picture Card that contains images specified for printing by another camera, those print specifications are all reset and replaced by the new print specifications.

- **DPOF FILE ERROR** (P.112)
  Up to 999 images can be specified on the same xD-Picture Card.
1. Set the Power switch to "On".
2. Press the "F" button.
3. Press "△" or "▼" to select "DPOF".
4. Press "△" or "▼" to display the frame (file) for specifying DPOF settings.
5. Press the "MENU/OK" button to display "DPOF SET FRAME".

When the data includes a frame (file) with DPOF settings that were specified on another camera, "RESET DPOF OK?" appears. Pressing the "MENU/OK" button erases all of the DPOF settings already specified for each frame (file). Specify the DPOF setting for each frame (file) again.

Pressing the "DISP/BACK" button leaves the previous settings unchanged.

When DPOF settings were specified on another camera:

When "△" appears on the screen during playback when the image has specified DPOF settings.

Pressing the "DISP/BACK" button while choosing the settings will cancel all the current settings. If there were previous DPOF settings, only the modifications are cancelled.

Always press the "MENU/OK" button after the settings are completed.

Pressing the "DISP/BACK" button cancels those settings.

Canceling a frame:

To cancel the DPOF setting for a frame (file) you have specified (cancel frame), perform steps 1 to 3 and then:
1. Press "△" or "▼" to select the frame (file) with the DPOF setting you want to cancel.
2. Set the number of prints to 0 (zero).
3. Press the "MENU/OK" button to complete the settings.

Prints of up to 999 image frames (files) can be ordered on the same xD-Picture Card.
DPOF settings cannot be specified for movie and CCD-RAW.
**Advanced Features**

### Set the Mode dial to "r".

Use "r" Movie mode to record movies with sound.

#### Specifications

- **Motion JPEG with monaural sound**
- **Quality selection method**
  - 640 x 480 pixels
  - 320 x 240 pixels
- **Frame rate**
  - 30 frames per second

See P.117 for information on the frame rate.

- See P.77 for information on changing the quality setting.
- The available recording time for a movie may decrease depending on the amount of free space on the xD-Picture Card.
- Because a movie is recorded onto the xD-Picture Card as it is saved, it cannot be recorded correctly if the camera suddenly loses power (if you open the battery cover or disconnect the AC power adapter).

It may not be possible to playback your movies on other cameras.

#### Recording times for xD-Picture Card

<td>14.6 min.</td>
</tr>
</tbody>
</table>

These figures are the available recording times using a new xD-Picture Card formatted on the camera. The actual recording times will vary depending on the free space available on the xD-Picture Card.

The available recording time and "STANBY" appear on the screen.

- Because sound is recorded concurrently with the images, make sure that you do not cover the microphone with a finger, etc. (P.9).

Press the "T" or "W" button to zoom in or out before recording. You must zoom beforehand as you cannot zoom during recording.

- **Optical zoom focal length**
  - (35 mm camera equivalent)
  - Approx. 37 mm-370 mm
  - Max. zoom scale: 10x
- **Focal range**
  - Wide-angle: approx. 90 cm (3.0 ft.) to infinity
  - Telephoto: approx. 20 m (6.6 ft.) to infinity

---

1. Set the Power switch to "F".
2. Press the "F" button.

1. Press "<" or ">" to select "DPOF ALL RESET.
2. Press the "MENU/OK" button.

A message appears. To reset all the DPOF settings, press the "MENU/OK" button.

---

**PHOTO MODE**

**PLAYBACK**

**DPOF ALL RESET**

**MOVIE MODE**

**RECORDING MOVIES**

1. Set the Mode dial to "r".

2. Use "r" Movie mode to record movies with sound.

3. Press the "T" or "W" button to zoom in or out before recording. You must zoom beforehand as you cannot zoom during recording.

---

continued
Press the shutter button down fully to start recording.

The brightness and color of the screen shown during movie recording may differ from those shown before recording begins.

There is no need to hold down the shutter button.

Pressing the shutter button down fully fixes the focus, however the exposure and white balance are adjusted for the scene being shot.

A counter appears in the top-right corner of the screen during recording. It shows the remaining time.

If the brightness of the subject changes during movie recording, the sound of lens operation may be recorded.

Some wind noise may be recorded in shots taken outdoors.

When the remaining time runs out, recording ends and the movie is saved onto the xD-Picture Card.

Press the shutter button during recording. Recording ends and the movie is stored on the xD-Picture Card.

If recording is stopped immediately after it begins, 1 second of movie is recorded onto the xD-Picture Card.

The quality setting is retained even when the camera is off or the Mode dial setting is changed.
1. Set the Power switch to “W”.
2. Press “D” or “C” to select the movie file.

Movies cannot be played back using multi-frame playback. Press the “DISP/BACK” button twice to select single-frame playback.

Indicated by the “v” icon.

2. Press “V” to play the movie.
3. The playback time appears on the screen along with a progress bar.

Take care not to block the speaker.
When the sound is difficult to hear, adjust the volume (P.79).
If the subject of the shot is very bright, white vertical streaks or black horizontal streaks may appear in the image during playback. This is normal.

Movies are displayed one size smaller than still images.

#### Playing movie files

- You may not be able to play some movie files recorded on other cameras.
- To play back movie files on a PC, save the movie file on the xD-Picture Card to the PCs hard disk and then play back the saved file.
SET-UP

USING THE SET-UP SCREEN

1. Press the "MENU/OK" button to display the menu on the screen.
2. Press "<" or ">") to select "OPTION" and then press "A" or "V" to select "SET-UP".
3. Press the "MENU/OK" button to display the SET-UP screen.

Always turn the camera off when replacing the batteries. Opening the battery cover or disconnecting the AC power adapter without turning the camera off may cause the camera settings to revert to the factory default values set at shipment.

Press "<" or ">") to move to options 1 to 4.

Press "A" or "V" to select a menu option.
Press "<" or ">") to change the setting. Press "C") for "FORMAT", "DATE/TIME", "TIME DIFFERENCE", "DISCHARGE" or "Q" RESET.

After you have changed the settings, press the "MENU/OK" button to confirm the changes.

</tr>
</tbody>
</table>
POWER SAVE SETTING

When this function is enabled and the camera is not used for 60 seconds, the screen temporarily turns off (sleep mode) and the indicator lamp blinks at 1-second intervals to save power. If the camera remains unused for 2 or 5 minutes, it is turned off. Use this function when you want to get the maximum possible running time from your batteries.

The Power save setting is disabled during automatic playback, discharging and when a USB connection is being used.

The Sleep function does not operate in SET-UP or Playback mode, but the camera will turn off if it is left unused for a set time (2 or 5 minutes).

To restore power to the camera

When the Power save function (2 or 5 minutes setting) has shut the camera down:
1. Set the Power switch to “OFF”.
2. Set the Power switch back to “a” or “w”.

FORMAT

Initialize (format) the xD-Picture Card for use with the camera. Because initializing the xD-Picture Card erases all the frames (files), including protected frames (files). Back up important frames (files) onto your PC or another media.

1. Press “d” or “c” to select “OK”.
2. Pressing the “MENU/OK” button erases all the frames (files) and initializes the xD-Picture Card.

- If “CARD ERROR”, “WRITE ERROR”, “READ ERROR” or “CARD NOT INITIALIZED” appears, see P.111-112 for information before formatting the xD-Picture Card.

WORLD TIME (TIME DIFFERENCE)

This function sets a time difference relative to the date and time currently set. When this setting is enabled, the specified time difference is applied when pictures are taken. Use this function when traveling to destinations in different time zones.

1. Press “a” or “b” to select “TIME DIFFERENCE”.
2. Press “c”.
3. Press “a” or “c” to select “HOME” and “LOCAL”.

To set the time difference, select “LOCAL”.

- HOME: Your home time zone
- LOCAL: Your destination time zone

Available time setting
-23:45 to +23:45 (in 15-minute increments)
### SET-UP

* How to display the SET-UP menu (P.80)

#### 4

Always press the “MENU/OK” button after the settings are completed.

#### 5

When the Photography mode is selected with world time set, “!” appears on the screen for 3 seconds.

Upon returning from a trip, always change the World time setting back to “!” HOME.

---

### FRAME NO.

Specifies whether frame numbers are assigned consecutively from previous numbers or begin again.

**CONT.:** Pictures are stored beginning from the highest file number stored on the last xD-Picture Card used.

**RENEW:** Pictures are stored on each xD-Picture Card beginning with a file number “0001”.

Setting this function to “CONT.” makes file management easier as it makes sure that file names are not duplicated when images are downloaded to a PC.

When the camera settings are “!” RESET”, the frame number setting (“CONT.” or “RENEW”) is changed to “CONT.” and the frame number itself does not return to “0001”.

When the xD-Picture Card already contains image files with file numbers higher than the highest file number on the last xD-Picture Card, images are stored beginning from the highest file number on the current xD-Picture Card.

Check the file number by viewing the image. The last 4 digits of the 7-digit number in the top right corner of the screen are the file numbers, while the first 3 digits show the directory number.

When changing the xD-Picture Card, always turn the camera off before opening the battery cover. Opening the battery cover without turning the camera off may cause the frame number memory to not function.

File number runs from 0001 to 9999. Once 9999 is exceeded, the directory number changes from 100 to 101. The maximum number is 999–9999.

The displayed frame number may differ for images photographed on other cameras.

When “!” FRAME NO. TOOL” appears, see P.111.

---

### CCD-RAW

Setting CCD-RAW to ON disables the signal processing functions (reconstituting the data received from the CCD as an image) performed on the camera. Consequently, this task must be performed on the PC.

Use the bundled RAW FILE CONVERTER LE software to perform the processing on a PC.

Conversion using RAW FILE CONVERTER LE also provides a simple way to create TIFF-format images.

* To rebuild images, FinePixViewer (on the bundled CD-ROM) must be installed on your PC.

#### The functions listed below cannot be used in CCD-RAW mode.

</tbody>
</table>

*1 Models with one of the above operating systems pre-installed.  
*2 Required to use the FinePix Internet Service. The software can still be installed even if you do not have an Internet connection.

Notes
• Connect the camera directly to the PC using the USB cable (mini-B). The software may not operate correctly when you use an extension cable or connect the camera via a USB hub.  
• When your PC has more than one USB port, the camera can be connected to either port.  
• Push the USB connector fully into the socket to ensure that it is securely connected. The software may not operate correctly if the connection is faulty.  
• Additional USB interface board is not guaranteed.  
• Windows 95 and Windows NT cannot be used.  
• Operation is not guaranteed on home-built PCs or on PCs running updated operating system software.  
• When you reinstall or remove FinePixViewer, the Internet menu and your user ID and password for the FinePix Internet Service are deleted from your PC. Click the [Register now] button, enter your registered user ID and password and download the menu again.  
• To use Video Chat, a PC running Windows XP Professional (Service Pack 1) or Windows XP Home Edition (Service Pack 1) is required with a sound card, a connected microphone and speakers, and Windows Messenger 5.0 or later installed. When using a router, check that the router is compatible with Windows Messenger.

Do not connect the camera to your PC until the software installation is completed.

1. Install FinePixViewer as instructed in the Quick start guide.

   ① Launching the installer manually
   — Double-click the “My Computer” icon.  
   — Windows XP users should click “My Computer” in the “Start” menu.  
   — Right-click “FINEPIX” (CD-ROM drive) in the “My Computer” window and select “Open”.  
   — Double-click “SETUP” or “SETUP.exe” in the CD-ROM window.

   — The way file names are displayed differs as described below depending on your PC settings.  
     • File extensions (3-letter suffixes indicating the file type) may be shown or hidden. (e.g. Setup.exe or Setup)  
     • Text may be shown normally or all in uppercase (e.g. Setup or SETUP).

   ② Installing other applications
   — You may see messages for installing, ImageMixer VCD2 for FinePix and WINASPI. Install these applications as directed by the on-screen instructions. The installation screens for these applications are displayed as required.

2. After restarting the PC, install DirectX as directed by the on-screen instructions and then restart your PC again. If the latest version of DirectX is already installed on your PC, this installation is not performed.
   — If the latest version is already installed, this window does not appear.  
   — Do not remove the CD-ROM during this procedure.

3. After restarting, the USB Video Class driver would be installed.
   — If the latest version is already installed, this window does not appear.  
   — The driver is only installed on Windows XP SP 1.

4. After restarting the PC, a message appears stating “Installation of the FinePixViewer has been completed.”
5.2 INSTALLATION ON A Mac OS 9.2

Pre-installation checklist
To run this software, you must have the hardware and software described below. Check your system before you begin the installation.

Compatible Mac
- Power Macintosh G3/4
- Power Macintosh G4, iMac, iBook,
- Power Macintosh G4 Cube or PowerBook G4

Operating System
Mac OS 9.2.2

RAM
- 64 MB minimum
- Minimum 256 MB when RAW FILE CONVERTER LE is used
- (When using ImageMixer VCD2 for FinePix: 128 MB or better)

Hard disk space
- Amount required for installation: 400 MB minimum
- Amount required for operation: 600 MB minimum
- Minimum 1 GB when RAW FILE CONVERTER LE is used

Display
- 800 x 600 pixels or better, at least 32,000 colors
- (When using ImageMixer VCD2 for FinePix: 1024 x 768 or better)

Internet connection
- To use the FinePix Internet Service or mail attachment function
- An Internet connection or e-mail transmission software is needed
- Connection speed: 56 k or better recommended

Notes
- Connect the camera directly to the Macintosh using the USB cable (mini-B). The software may not operate correctly if you use an extension cable or connect the camera via a USB hub.
- Push the USB connector fully into the socket to ensure that it is securely connected. The software may not operate correctly if the connection is faulty.
- Additional USB interface board is not guaranteed.
- On Macintosh PCs, allocate at least 400 MB of virtual memory when RAW FILE CONVERTER LE is used. If other applications will be used at the same time, allocate the additional amount required for those applications also.

1. Turn on your Macintosh and start up Mac OS 9.2.2.
2. Do not connect the camera to your Macintosh until the software installation is completed.
3. When the bundled CD-ROM is loaded into the CD-ROM drive, the [FinePix] volume appears. Double-click the volume icon to open the volume window.
4. Double-click “Installer for MacOS9” to launch the Installer.
5. The Installer setup screen appears. Click the [Installing FinePixViewer] button.
   - For more information on what is installed, click the [Read Me First] button and [Using FinePixViewer] button.
6. A confirmation message appears asking whether you want to continue with the installation. Click the [OK] button.
7. The User License Agreement for this software appears. Read the agreement carefully and then, if you agree to the terms of the Agreement, click the [Agree] button. If you click the [Disagree] button, the software is not installed.
8. Select the installation destination for FinePixViewer.
   - Click the [Open] button to open the installation destination folder.
   - Click the [Save] button.
9. Install ImageMixer VCD2 for FinePix as directed by the on-screen instructions.
5.2 INSTALLATION ON A Mac OS 9.2

9. After restarting the Macintosh, the “FinePixViewer installation completed” message appears. Click “Using FinePixViewer” to view the basic FinePixViewer functions.

5.3 INSTALLATION ON A Mac OS X

Pre-installation checklist

Hardware and software requirements
To run this software, you must have the hardware and software described below. Check your system before you begin the installation.

<table>
<thead>
<tr>
<th></th>
<th></th>

</tr>
</tbody>
</table>

**1 Models with a USB port as a standard feature
**2 Required to use the FinePix Internet Service. The software can still be installed even if you do not have an Internet connection.

Notes

- Connect the camera directly to the Macintosh using the USB cable (mini-B). The software may not operate correctly if you use an extension cable or connect the camera via a USB hub.
- Push the USB connector fully into the socket to ensure that it is securely connected. The software may not operate correctly if the connection is faulty.
- Additional USB interface board is not guaranteed.
- On Macintosh PCs, allocate at least 400 MB of virtual memory when RAW FILE CONVERTER LE is used. If other applications will be used at the same time, allocate the additional amount required for those applications also.

1. To install Acrobat Reader, click “Install Acrobat Reader”.
2. Install Adobe Systems’ Acrobat Reader software to read the FinePixViewer User’s Guide (PDF). If the latest version already has been installed, this step is not required.
3. Proceed with the installation as directed by the on-screen instructions.

To install Acrobat Reader later...

1. Double-click the “FinePix” CD-ROM to open the CD-ROM window.
3. Double-click “English Reader Installer”.
4. Proceed with the installation as directed by the on-screen instructions.
5.3 INSTALLATION ON A Mac OS X

1. Turn your Macintosh on and start up Mac OS X. Do not launch any other applications.

2. When the bundled CD-ROM is loaded into the CD-ROM drive, the “FinePix” icon appears. Double-click the “FinePix” icon to open the “FinePix” volume window.

3. Double-click on “Installer for MacOS X”.

4. The Installer setup dialog appears. Click the [Installing FinePixViewer] button. For more information on what is installed, click the [Read Me First] button and [Using FinePixViewer] button.

5. The “Authenticate” dialog appears. Enter the name and password for the administrator account and then click the [OK] button.* The administrator account is the user account used for Mac OS X installation and you can confirm the user account in the Accounts dialog in the System Preferences.

6. The “License” dialog appears. Read the agreement carefully and then, if you agree to the terms of the Agreement, click the [Accept] button.

7. The “Read me” dialog appears. Click the [Continue] button.

8. The “FinePixInstallOSX” window appears. Click the [Install] button to install FinePixViewer and RAW FILE CONVERTER LE.

9. The ImageMixer VCD2 installer automatically starts up and a window showing the installation progress appears. (Installation may take several minutes.)

10. The “FinePixViewer installation completed” message dialog appears. Then click exit button and close it.

11. Launch “Image Capture” from the “Applications” folder.

13. Select “Other...” from “When a camera is connected, open”.

14. Select “FPVBridge” from “FinePixViewer” folder in the “Applications” folder and click the [Open] button.

15. Select “Quit Image Capture” menu in the “Image Capture” menu.
6.2 CONNECTING TO A PC

The “Connecting to a PC” section explains how to connect the camera to your PC using the USB cable (mini-B) and describes the functions you can use once the camera and PC are connected.

If the power cuts out during data transmission, the data will not be transmitted correctly. Always use the AC power adapter when connecting the camera to a PC.

Refer to Section 5 the first time you connect the camera to your PC. Install the software first. Do not connect the camera to the PC before installing all the software.

CD-ROM
(Software for FinePix AX)

This mode provides a simple way to read images from an xD-Picture Card and store images onto an xD-Picture Card (➡P.96).

WEB CAM (Web Camera) mode

This function allows you to conduct videoconferencing sessions between PCs connected to the Internet.

The WEB Camera function can only be used on Windows XP SP1.
Microsoft Windows Messenger 5.0 or later is required to use the WEB Camera function.
For downloading and using this software, please refer to the below explanation for “Using Video Chat with Windows Messenger" No. 8. Please download it from the Messenger web site.
Images are not output to a TV.
When using Video Chat with the WEB Camera function, Windows XP SP1 is required also for your partner's OS.
Change between "WEB" and "WEB CAM" in the camera’s SET-UP screen.

◆ Using Video Chat with Windows Messenger ◆

Connecting camera to a PC
1. Plug the AC power adapter connector into the “DC IN 5V” socket on the camera and then plug the AC power adapter into the power outlet.
2. Turn the Power switch to turn the camera on (➡P.14).
3. Select “WEB” in “USB MODE” in the SET-UP menu (➡P.80).
4. Turn the camera off (➡P.14).
5. Turn your PC on.
6. Use the USB cable to connect the camera to your PC.
7. Turn the Power switch to turn the camera on (➡P.14).
8. Using Video Chat with Windows Messenger, refer to “How to use FinePixViewer” in the HELP menu which was installed from the CD-ROM.

Make sure that the USB cable (mini-B) is connected correctly and pushed in.
- "WEB CAM" appears on the screen.
- The screen darkens when the WEB Camera is used.
- Power save and Auto power off are disabled during USB connection.

Disconnecting the Camera
1. Quit all applications (FinePixViewer etc.) that are using the camera.
2. Turn the camera off (➡P.14).
3. Unplug the USB cable from the camera.
6.2 CONNECTING TO A PC

USE AT DSC MODE

1 Set a camera

1 Insert an xD-Picture Card into the camera. Plug the AC power adapter connector into the “DC IN 5V” socket on the camera and then plug the adapter into the power outlet.
2 Turn the Power switch to turn the camera on.
3 Set the “USB MODE” setting in the “SET-UP” menu to “¶” (P.80). Turn the Power switch to turn the camera off.

2 Connect a camera to a PC

1 Turn your PC on.
2 Connect the camera to your PC using the USB cable (mini-B).
3 Turn the camera on.

- Make sure that the USB cable (mini-B) is connected correctly and pushed in.

- When the camera and PC are exchanging data, the self-timer lamp blinks and the indicator lamp blinks alternately green and orange.

- Power save and Auto power off are disabled during USB connection.

- Before replacing the xD-Picture Card, always disconnect the camera from the PC. See P.98 for information on the disconnection procedure.

- Do not disconnect the USB cable (mini-B) when the camera is communicating with a PC. See P.98 for information on the disconnection procedure.

3 Set a PC

Windows 98 / 98 SE / Me / 2000 Professional / Macintosh

1 The “Found New Hardware” help message appears in the bottom-right corner of your screen. This message will close when the settings are completed. No action is required.
2 This step is not required for subsequent connections.
3 Specify the settings in the “AutoPlay” dialog box.
- FinePixViewer automatically starts up and the Save Image Wizard window (Save Image dialog box) appears. Follow the instructions provided on screen to save the images at this point. To proceed without saving the images, click the [Cancel] button.

- A removable disk icon appears and you can use your PC to transfer files to and from the camera.

- If the above operations do not occur, you do not have the required software programs or drivers installed on your PC. Complete the required PC setup procedures. Then reconnect the camera to your PC.

Windows XP

1 The “Found New Hardware” help message appears in the bottom-right corner of your screen. This message will close when the settings are completed. No action is required.
2 This step is not required for subsequent connections.
3 Specify the settings in the “AutoPlay” dialog box.

- When FinePixViewer is included in the list of actions to perform

Select “Viewing images using FinePixViewer” and then select the “Always do the selected action” checkbox. This checkbox may not be shown in some cases. Click the [OK] button to launch FinePixViewer.

- When FinePixViewer is not included in the list of actions to perform

Select “Take no action” and then select the “Always do the selected action” checkbox. This checkbox may not be shown in some cases. Click the [OK] button and launch FinePixViewer manually.

- A new removable disk icon appears in the “My Computer” window. FinePixViewer automatically starts up and the Save Image Wizard window (Save Image dialog box) appears. Follow the instructions provided on screen to save the images at this point. To proceed without saving the images, click the [Cancel] button.

- The next time you connect the camera, the removable disk drive icon’s name changes to the “FinePix” icon and name.

Proceed to “USING FinePixViewer” on P.99.
6.3 USING FinePixViewer

6.3.1 Mastering FinePixViewer
For all information on FinePixViewer functions, refer to “How to Use FinePixViewer” in the Help menu for details.

Macintosh
You must install Adobe Systems’ Acrobat Reader. See P.90 for information on installing Acrobat Reader.
For more information on using Acrobat Reader, refer to the Acrobat Reader “Help” menu.

Example: Looking up slide shows
1. Click “How to Use FinePixViewer” in the FinePixViewer Help menu.
2. Click “Basic Operation” and then click “Basic Slide Show Operations” in the menu that appears.
3. The “Basic Slide Show Operations” information appears. Press the “<<<” key to view the previous page or the “>>>” key to view the next page.

6.3.2 Uninstalling the software
Only perform this operation when you no longer require the installed software or when the software was not installed correctly.

Windows
1. Check that the camera is not connected to the PC.
2. Quit all currently running applications.
3. Open the “My Computer” window. Then open the “Control Panel” and double-click on “Add/Remove Programs”.
4. The “Add/Remove Programs Properties” window appears. Select the software to be uninstalled (FinePixViewer or the driver) and then click the [Add/Remove] button.
6.4 CONNECTING THE CAMERA DIRECTLY TO THE PRINTER — PictBridge FUNCTION

When a printer that supports PictBridge is available, images can be printed by connecting the camera directly to the PictBridge-compatible printer without using a PC.

In PictBridge function, images photographed on other than a camera may not be printed.

6.4.1 Specifying Images for printing on the camera

1. Set the Power switch to “w” to turn the camera on.
2. Select “®” in “USB MODE” in the “SET-UP” menu (➡ P.80). Set the Power switch to “OFF” to turn the camera off.

Do not connect to a PC when the USB mode setting is set to “®”. See P.114 if you connect to PC by mistake.

Connect the camera to the printer using the USB cable (mini-B).
2. Turn the printer on.

The camera cannot be used to specify printer settings such as the paper size and print quality.
Please connect the AC power adapter AC-5VH (sold separately) to your camera.
Use an xD-Picture Card that was formatted in the camera.

Set the Power switch to “w”.
“CHECKING USB” appears and then the menu is displayed on the screen.

If the menu does not appear, check whether the USB mode setting is “®”. Depending on the printer, some functions are disabled.

Press “a” or “b” to select “® PRINT DPOF”.
2. Press the “MENU/OK” button.

When “® NOT SET DPOF” appears, the DPOF settings are not specified.
To use DPOF printing, the DPOF settings must be specified on FinePix S5100/FinePix S5500 beforehand (➡ P.72).
Even when “WITH DATE” is specified in the DPOF settings, the date is not inserted from printers that do not support date printing.
6.4 CONNECTING THE CAMERA DIRECTLY TO THE PRINTER — PictBridge FUNCTION

5

Press the “MENU/OK” button to download the data to the printer and print the frames specified in the DPOF settings.

Press the “DISP/BACK” button to cancel the printing. Depending on the printer, the printing may not be canceled immediately. Printing may stop midway through. When printing stops midway, briefly turn the camera off and then on again.

6.4.2 Specifying images for printing without using DPOF (single-frame printing)

1

① Set the Power switch to “B” to turn the camera on.
② Select “USB MODE” in the “SET-UP” menu (➡ P.80). Set the Power switch to “OFF” to turn the camera off.

Do not connect to a PC when the USB mode setting is set to “USB MODE”. See P.114 if you connect to a PC by mistake.

2

① Connect the camera to the printer using the USB cable (mini-B).
② Turn the printer on.

The camera cannot be used to specify printer settings such as the paper size and print quality.
Please connect the AC power adapter AC-5VH (sold separately) to your camera.
Use an xD-Picture Card that was formatted in the camera.

Set the Power switch to “B”.
“CHECKING USB” appears and then the menu is displayed on the screen.

If the menu does not appear, check whether the USB mode setting is “USB MODE”.
Depending on the printer, some functions are disabled.

Press the “MENU/OK” button to download the data to the printer and start printing the specified number of prints.
To end printing, press the “DISP/BACK” button.

Press the “MENU/OK” button to download the data to the printer and print the frames specified in the DPOF settings.

If “PRINT WITH DATE” is not available when the camera is connected to a printer that does not support date printing.

Press “A” or “B” to display the frame (file) for specifying PRINT settings.
Press “A” or “B” to set a value up to 99 as the number of copies of the frame (file) to be printed.
For frames (files) that you do not want printed, set the number of prints to 0 (zero).
To specify more PRINT settings, repeat steps 1 and 2.
Always press the “MENU/OK” button after the settings are completed.

Movie images cannot be printed.

Press the “MENU/OK” button to download the data to the printer and start printing the specified number of prints.
To end printing, press the “DISP/BACK” button.

Press the “DISP/BACK” button to cancel the printing. Depending on the printer, the printing may not be canceled immediately. Printing may stop midway through. When printing stops midway, briefly turn the camera off and then on again.

Disconnecting the printer

Check that “PRINTING” is not displayed on the camera’s screen.
Turn the camera off. Unplug the USB cable.
System Expansion Options

By using the FinePix S5100/FinePix S5500 together with other optional FUJIFILM products, your system can be expanded to fill a wide range of uses.

![Diagram of System Expansion Options]

- **Image input/output to the PC**
  - FinePix S5100 / FinePix S5500 Digital Camera
  - USB
  - Personal Computer (commercially available)
  - Image Memory Card Reader DPC-R1
    - DPC-R1
  - xD-Picture Card™ USB Drive DPC-UD1
    - DPC-R1
  - PC Card Adapter DPC-AD
    - (PC card slot)
  - CompactFlash™ Card Adapter DPC-CF
    - (CF card slot)

- **Print creation**
  - FinePix S5100 / FinePix S5500 Digital Camera
  - USB
  - Personal Computer (commercially available)
  - PictBridge
  - Digital Photo Printer CX-550

  - FinePix S5100 / FinePix S5500 Digital Camera
  - (Audio/Visual output)
  - TV monitor (commercially available)

![Diagram of Accessories Guide]

Accessories Guide

The accessories (sold separately) can make taking pictures with the FinePix S5100/FinePix S5500 even easier. For information on how to attach and use the accessories, refer to the instructions provided with the accessory used. Visit the FUJIFILM web site for the latest information on camera accessories.

- **xD-Picture Card**
  - These are separately available xD-Picture Cards.
  - Use the following xD-Picture Cards:
    - DPC-16 (16 MB)/DPC-32 (32 MB)/DPC-64 (64 MB)/DPC-128 (128 MB)/DPC-256 (256 MB)/DPC-512 (512 MB)

- **Rechargeable Battery 2HR-3UF (2x)**
  - The 2HR-3UF includes 2 pieces of high-capacity AA-size Nickel-Metal Hydride (Ni-MH) batteries.

- **Battery Charger with Battery BK-NH/BK-NH2**
  - (With Euro type or UK type plug)
  - The BK-NH/BK-NH2 includes the quick battery charger BCH-NH/BCH-NH2 and 2 Ni-MH batteries. The BCH-NH/BCH-NH2 can charge 2 Ni-MH batteries in approximately 120 minutes. Up to 4 Ni-MH batteries can be charged simultaneously.

- **AC Power Adapter AC-5VH/AC-5VHS**
  - Use the AC-5VH/AC-5VHS when taking pictures or playing back images for long periods or when the FinePix S5100/FinePix S5500 is connected to a PC.

- **Soft Case SC-FXS5**
  - This is a special case made of Leather/Polyester that protects the camera against soil, dust and minor impacts when it is being carried.

- **Image Memory Card Reader DPC-R1**
  - The DPC-R1 provides a quick and easy way to transfer images back and forth between your PC and an image memory card (xD-Picture Card and SmartMedia). The DPC-R1 uses the USB interface for high-speed file transfer.
  - Compatible with Windows 98/98 SE, Windows Me, Windows 2000 Professional, Windows XP or iMac, Mac OS 8.6 to 9.2, Mac OS X (10.1.2 to 10.2.2) and models that support USB as standard.
  - Compatible with xD-Picture Cards of 16 MB to 512 MB, and SmartMedia of 3.3 V, 4 MB to 128 MB.

- **PC Card Adapter DPC-AD**
  - The PC Card Adapter allows the xD-Picture Card and SmartMedia to be used as a PC Card Standard ATA-compliant (PCMCIA 2.1) PC card (Type II).
  - Compatible with xD-Picture Card of 16 MB to 512 MB, and SmartMedia of 3.3 V, 2 MB to 128 MB.

- **CompactFlash™ Card Adapter DPC-CF**
  - Loading an xD-Picture Card into this adapter allows you to use the card as a CompactFlash card (Type I).
  - Windows 95/98/98 SE/Me/2000 Professional/XP
  - Mac OS 8.6 to 9.2/X (10.1.2 to 10.1.5)

- **xD-Picture Card™ USB Drive DPC-UD1**
  - This is a compact card reader for xD-Picture Cards. Simply plug the drive into the USB port to read and write data to an xD-Picture Card. (No driver installation is required except on Windows 98/98 SE).
  - Compatible with xD-Picture Card of 16 MB to 512 MB
  - Windows 98/98 SE/Me/2000 Professional/XP
  - Mac OS 9.0 to 9.2/X (10.0.4 to 10.2.6)
Conversion Lens Guide (sold separately)

Wide conversion lens WL-FX9/WL-FX9B
Changes the focal length by a factor of 0.79× (wide-angle: equivalent to 29 mm) without altering the F-stop value of the lens.
- **Wide conversion lens specifications**
  - Magnification: 0.79×
  - Lens configuration: 3 lenses in 3 groups
  - Shooting range: approx. 90 cm (3.0 ft.) to infinity
  - Dimensions: 70 mm (2.76 in.) dia. × 32 mm (1.26 in.)
  - Mass (Weight): approx. 185 g (6.5 oz.)
- **Accessories:**
  - Adapter ring AR-FX9 (see below remarks)
  - Lens caps (front and rear), Lens pouch
- **Except for body color, the specifications of the WL-FX9 and WL-FX9B are the same.

Wide conversion lens WL-FX9B:
- The adapter ring enclosed with the FinePix S5100/FinePix S5500 (AR-FX5A) should be used with this conversion lens. The adapter rings provided with these conversion lenses (AR-FX9 for FinePix 4900 zoom/6900 zoom/S602 zoom/S700/S20 Pro) cannot be used with the FinePix S5100/FinePix S5500.
- Only use the wide conversion lens at the wide-angle zoom setting.
- The built-in flash cannot be used when the wide conversion lens is mounted.
- Commercially available filters can be mounted on the lens when the adapter ring is attached, but no more than one filter should be mounted at a time.

Teleconversion lens TL-FX9/TL-FX9B
Changes the focal length by a factor of 1.5× (telephoto: equivalent to 555 mm) without altering the F-stop value of the lens.
- **Teleconversion lens specifications**
  - Magnification: 1.5×
  - Lens configuration: 3 lenses in 3 groups
  - Shooting range: approx. 5.0 m (16.4 ft.) to infinity
  - Dimensions: 65 mm (2.56 in.) dia. × 55 mm (2.17 in.)
  - Mass (Weight): approx. 100 g (3.5 oz.)
- **Accessories:**
  - Adapter ring AR-FX9 (see below remarks)
  - Lens caps (front and rear), Lens pouch
- **Except for body color, the specifications of the TL-FX9 and TL-FX9B are the same.

TL-FX9B: Black
- The adapter ring enclosed with the FinePix S5100/FinePix S5500 (AR-FX5A) should be used with this conversion lens. The adapter rings provided with these conversion lenses (AR-FX9 for FinePix 4900 zoom/6900 zoom/S602 zoom/S700/S20 Pro) cannot be used with the FinePix S5100/FinePix S5500.
- Only use the tele conversion lens at the telephoto zoom setting.
- The built-in flash cannot be used when the teleconversion lens is mounted.
- Commercially available filters can be mounted on the lens when the adapter ring is attached, but no more than one filter should be mounted at a time.

Using Your Camera Correctly

- **Power Supply and Batteries**
  - In the camera, use AA-size alkaline or nickel-metal hydride (Ni-MH) batteries.
  - Do not use AA-size manganese or nickel-cadmium (Ni-Cd) batteries in your FinePix S5100/FinePix S5500 because the heat created by the batteries could damage the camera or cause date settings to be cleared.
  - The life of alkaline batteries varies between brands.
  - The life of batteries you purchase may be shorter than those provided with the camera.
  - Do not use AA-size batteries at the same time.
  - Do not use different types or brands of batteries at the same time.
  - If you do not intend to use the camera for a long period of time, remove the batteries and the xD-Picture card and wait a short time.
  - **When the Camera is Not Used or is Stored Periods of Time**
    - If you do not intend to use the camera for a long period of time, remove the batteries and the xD-Picture card.
  - **Cleaning Your Camera**
    - Use a blower brush to brush away any dust on the lens, LCD monitor, viewfinder and then gently wipe the camera with a soft, dry cloth. If any soil remains, apply a small amount of lens cleaning liquid to a piece of FUJIFILM lens cleaning paper and wipe gently.
    - Do not scratch hard objects against the lens, LCD monitor or viewfinder.
    - Clean the body of the camera with a soft, dry cloth.
    - Do not use volatile substances or cleaning products these items can cause damage.
  - **Using the Camera When Traveling**
    - When traveling overseas, do not place your camera in the check-in baggage. Baggage can be subjected to violent shocks, and the camera may be damaged inside or outside.
  - **Applicable Batteries**
    - In the camera, use AA-size alkaline or nickel-metal hydride (Ni-MH) batteries.
    - Do not use AA-size manganese or nickel-cadmium (Ni-Cd) batteries in your FinePix S5100/FinePix S5500 because the heat created by the batteries could damage the camera or cause date settings to be cleared.
    - The life of alkaline batteries varies between brands.
    - The life of batteries you purchase may be shorter than those provided with the camera.
    - Do not use AA-size batteries at the same time.
    - Do not use different types or brands of batteries at the same time.
    - If you do not intend to use the camera for a long period of time, remove the batteries from the camera. Note if the camera is left with the batteries removed, the time and date settings are cleared.
    - The batteries feel warm right after being used.
    - Before removing the batteries, turn the camera off and wait an hour before using the camera. Condensation may also form on the xD-Picture card. In this event, remove the xD-Picture card and wait a short time.
    - **When the Camera is Not Used or is Stored Periods of Time**
      - If you do not intend to use the camera for a long period of time, remove the batteries and the xD-Picture card.
    - **Cleaning Your Camera**
      - Use a blower brush to brush away any dust on the lens, LCD monitor, viewfinder and then gently wipe the camera with a soft, dry cloth. If any soil remains, apply a small amount of lens cleaning liquid to a piece of FUJIFILM lens cleaning paper and wipe gently.
      - Do not scratch hard objects against the lens, LCD monitor or viewfinder.
      - Clean the body of the camera with a soft, dry cloth.
      - Do not use volatile substances or cleaning products these items can cause damage.
    - **Using the Camera When Traveling**
      - When traveling overseas, do not place your camera in the check-in baggage. Baggage can be subjected to violent shocks, and the camera may be damaged inside or outside.
Power Supply and Batteries

Using the AA-size Ni-MH batteries correctly

- As a power source in digital cameras, AA-size Ni-MH batteries (referred to hereafter as Ni-MH batteries) are superior to alkaline batteries in several ways, such as allowing more shots to be taken with the camera. However, care must be taken with the way Ni-MH batteries are used if their original performance is to be maintained.
- Ni-MH batteries left unused in storage for long periods can become “deactivated”. Also, repeatedly charging Ni-MH batteries that are only partially discharged can cause them to suffer from the “memory effect”. Ni-MH batteries that are “deactivated” or affected by “memory” suffer from the problem of only providing power for a short time after being charged. To prevent this problem, charge and recharge them several times using the camera’s “Discharging rechargeable batteries” function. By repeating this cycle several times, the temporary reduction in performance caused by “memory” or “deactivation” can be remedied and the batteries can be restored to their original performance levels. Deactivation and memory are specific to Ni-MH batteries and are not in fact battery faults. See P.109 for the procedure for “Discharging rechargeable batteries”.

AC Power Adapter

Always use the AC Power Adapter AC-SVH/AC-SVHS with the camera.

- Use the AC power adapter for indoor use only.
- Plug the connection cord plug securely into the DC input terminal of the FUJIFILM Digital camera.
- Turn off the FUJIFILM Digital camera before disconnecting the cord from the FUJIFILM Digital camera’s DC input terminal. To disconnect, pull out the plug gently. Do not pull on the cord.
- Do not use the AC power adapter with any device other than your camera.
- During use, the AC power adapter will become hot to the touch. This is normal.
- Do not take apart the AC power adapter. Doing so could be dangerous.
- Do not subject the AC power adapter to strong shocks.
- Do not use the AC power adapter in a hot humid place.
- Do not subject the AC power adapter to strong shocks.
- The AC power adapter may emit a humming. But this is normal.
- If used near a radio, the AC power adapter may cause static. If this happens, move the camera away from the radio.

Procedure for discharging rechargeable Ni-MH batteries

The “Discharging rechargeable batteries” function can only be used with Ni-MH batteries.

The “Discharging rechargeable batteries” function should not be used with alkaline batteries as it will completely drain the battery charge.

Use the “Discharging rechargeable batteries” function in the following situations:
- When the batteries can only be used for a short time after being charged normally
- When the batteries have not been used for a long period
- When you purchase new Ni-MH batteries

Do not use the “Discharging rechargeable batteries” function while using the AC power adapter. In these situations, the Ni-MH batteries will not be discharged due to the external power supply.

To charge Ni-MH batteries, use the quick battery charger (sold separately). Refer to the instructions supplied with the charger to make sure that the charger is used correctly.

Ni-MH batteries will self-discharge even when not used, and the time for which they can be used may be shortened as a result.

Ni-MH batteries will deteriorate rapidly if overdischarged (eg. by discharging the batteries in a flashlight). Use the “Discharging rechargeable batteries” function provided in the camera to discharge the batteries.

Ni-MH batteries have a limited service life. If a battery can only be used for a short time even after repeated discharge-charges cycles, it may have reached the end of its service life.

Disposing of Batteries

When disposing of batteries, do so in accordance with your local waste disposal regulations.
Notes on the xD-Picture Card™

■ Using xD-Picture Card with a PC
- When taking pictures using an xD-Picture Card that has been used on a PC, reformat the xD-Picture Card in your camera for best quality.
- When formatting an xD-Picture Card, a directory (folder) is created. Image data is then recorded in this directory.
- Do not change or delete the directory (folder) or file names on the xD-Picture Card because this will make it impossible to use the xD-Picture Card in your camera.
- Always use the camera to erase image data on an xD-Picture Card.
- To edit image data, copy the image data to the PC and edit the copy.

■ Specifications
- Image memory card for digital cameras (xD-Picture Card)
- NAND-type flash memory
- Temperature: 0°C to +40°C (+32°F to +104°F)
- Humidity: 80% max. (no condensation) 25 mm x 20 mm x 2.2 mm (0.98 in. x 0.79 in. x 0.09 in.) (W x H x D)

■ Handling xD-Picture Card
- When storing xD-Picture Cards, make sure that they are kept out of the reach of children. An xD-Picture Card could be swallowed cause suffocation. If a child swallows an xD-Picture Card, seek medical attention or call emergency number right away.
- When inserting the xD-Picture Card into the camera, hold the xD-Picture Card straight as you push it in.
- Do not expose an xD-Picture Card to shock. Do not apply pressure, and avoid bending.
- Do not use or store xD-Picture Card in hot humid places.
- Clean the xD-Picture Card with a soft dry piece of cloth when dirty.
- When carrying or storing an xD-Picture Card, keep it in the special protective case.
- The xD-Picture Card will work well for long time, but will sooner or later lose its ability to store and play back images or movies. If this happens replace it with a new xD-Picture Card.
- Never remove the xD-Picture Card or turn the camera off during data recording or erasing (xD-Picture Card formatting) as this could be damaged to the xD-Picture Card.
- The use of xD-Picture Cards is recommended with the FinePix S5100/FinePix S5500. The recording quality cannot be guaranteed when xD-Picture Cards other than those manufactured by FUJIFILM are used.
- The xD-Picture Card may feel warm when it is removed from the camera after taking pictures. This is normal.
- Do not put labels on the xD-Picture Card. Peeling labels can cause the camera not to work properly.

■ Image Memory Card
- This Image Memory Card is a new image recording media (xD-Picture Card) developed for digital cameras. The Image Memory Card consists of a semiconductor memory (NAND-type flash memory) to record digital image data. The recording process is electrically performed and enables erasure of existing image data as well as recording of new image data.
- When using a new Memory Card, or a Memory Card that has been formatted by a PC, be sure to format the card with your digital camera before using it.

■ Protecting Your Data
- Images and movies may be lost or destroyed in the following situations. Please note that FUJIFILM assumes no responsibility for data that is lost or destroyed.
  1. Removal of the memory card or turning the power off while the memory card is being accessed (i.e., during record, erase, initialization, and playback operations).
  2. Improper handling and use of the memory card by the user or third party.
- Save your important data to another media (i.e., MO disk, CD-R, hard disk, etc.).
- Camera fault.

Specifications

System

- **Model**: Digital camera FinePix S5100/FinePix S5500
- **Effective pixels**: 4.0 million pixels
- **CCD**: 1/2.7 inch square pixel CCD  
  Number of total pixels: 4.23 million pixels
- **Number of recorded pixels**: Still image: 2272 × 1704 pixels/1600 × 1200 pixels/960 × 960 pixels/640 × 480 pixels (Exif),  
  Movie: 640 × 480 pixels (30 frames per second with monaural sound)  
  320 × 240 pixels (30 frames per second with monaural sound)
- **Storage media**: xD-Picture Card (16/32/64/128/256/512 MB)
- **File format**: Still image: Compressed JPEG (Exif ver. 2.2)  
  Uncompressed: CCD-RAW (RAF)  
  Design rule for Camera File System compliant DPOF compatible
- **Movie**: AVI format, Motion JPEG  
  Audio: WAVE format, Monaural sound
- **Lens**: Fujinon 10x optical zoom lens: F2.8-8.3
- **Aperture**: F2.8-8.3: 10 steps at wide-angle/F3.1-9: 10 steps at telephoto in 1/3 EV increments
- **Manual/Auto selectable**
- **Focal length**: 1-5.7 mm to 57 mm  
  (Equivalent to 37 mm to 370 mm on a 35 mm camera)
- **Digital zoom**: approx. 1.4x / 1.8x / approx. 3x / approx. 3.6x  
  (10x optical zoom lens is used together: Max. zoom scale: 35x+)
- **Focal range**: Normal: Wide-angle: Approx. 90 cm (3.0 ft.) to infinity  
  Telephoto: Approx. 2.0 m (6.6 ft.) to infinity  
  Macro: Wide-angle: Approx. 10 cm to 2.0 m (3.9 in. to 6.6 ft.)  
  Telephoto: Approx. 90 cm to 2.0 m (3.0 ft. to 6.6 ft.)
- **Shutter speed**: 1/30 sec. to 1/1000 sec.  
  "P" (Programmed auto): 1/30 sec. to 1/1000 sec.  
  A: 1/30 sec. to 1/1000 sec.  
- **Focus**: TTL contrast-type, Auto focus, Manual focus
- **Sensitivity**:  
  AUTO (Equivalent to ISO 64 to 320), depending on conditions) 64/100/200/400  
  M: 100 to 400  
  P/S/A/M: Equivalent to ISO 64/100/200/400  
  (During setting CCD-RAW: ISO 64/100/200)
- **Photometry**: TTL 64-zones metering Multi, Spot, Average
- **Exposure control**: Program AE (P), Shutter-priority AE, Manual exposure
- **Exposure compensation**: -2.0 EV to +2.0 EV in 1/3 EV step increments
  (in Programmed auto, shutter-priority auto, Aperture-priority auto)
- **White balance**: Auto ( ), Shutter-priority AE, Manual exposure
- **Viewfinder**: 0.33 inches, 115,000 pixels electronic viewfinder, Approx. 100% coverage
- **LCD monitor**: 1.5 inches, low-temperature polysilicon TFT 115,000 pixels, Approx. 100% coverage
- **Flash type**: Auto flash using flash control sensor
  Effective range: Wide-angle: Approx. 30 cm to 5.0 m (1.0 ft. to 16.4 ft.)  
  Telephoto: Approx. 30 cm to 2.0 m (1.0 ft. to 6.6 ft.)  
  Macro: Approx. 80 cm to 4.5 m (2.6 ft. to 14.8 ft.)
  Flash modes: Auto, Red-eye reduction, Forced flash, Suppressed flash, Slow synchro, Red-eye reduction + Slow synchro
- **Self-timer**: Approx. 2 sec./10 sec.
- **Continuous shooting**: Top 3-frame: Number of recorded frames: up to 3 frames (at intervals as short as approx. 0.3 sec.)
  Final 3-frame: Number of recorded frames: last 3 frames before releasing the shutter button (at intervals as short as approx. 0.3 sec.)
  Long-period continuous shooting: Number of recorded frames: up to 40 frames (at intervals as short as approx. 0.6 sec.)
- **Shooting functions**: Best framing, Frame No. memory
- **Playback functions**: Trimming, Automatic playback, Multi-frame playback, Voice memo
- **Other functions**: PictBridge, Language (English, English, Français, Deutsch, Español, Italiano, 中文), FinePix photo mode (F-mode), WEB camera, AC power adapter
- **A/V output**: NTSC/PAL selectable
Specifications

Input/Output Terminals

A/V output socket 2.5 mm dia. jack
DC input Socket for specified AC power adapter AC-5VH/AC-5VHS (sold separately)

USB socket For file transfer to a PC

Power Supply and Others

Power supply Use one of the following:
- 4x AA-size alkaline batteries
- 4x AA-size Ni-MH (Nickel-Metal Hydride) batteries (sold separately)
- AC Power Adapter AC-5VH/AC-5VHS (sold separately)

Guide to the number of available shots for battery operation

<table>
<thead>
<tr>
<th>Battery Type</th>
<th>With LCD monitor ON</th>
</tr>
</thead>
<tbody>
<tr>
<td>Ni-MH batteries</td>
<td>Approx. 200 frames</td>
</tr>
<tr>
<td>Alkaline batteries</td>
<td>Approx. 400 frames</td>
</tr>
</tbody>
</table>

According to the CIPA (Camera & Imaging Products Association) standard procedure for measuring digital still camera battery consumption (extract): When using alkaline batteries, use the batteries supplied with the camera. You can use Ni-MH batteries also. The storage media should be xD-Picture Card. Pictures should be taken at a temperature of 23°C (+73°F), with the LCD monitor/viewfinder (EVF) turned on, the optical zoom moved from full wide-angle to full telephoto (or vice-versa) and back again to its original position every 30 seconds, the flash used at full power every second shot and the camera turned off and then on again once every 10 shots.

Note: Because the number of available shots varies depending on the capacity of alkaline batteries or the level of charge in Ni-MH batteries, the figures shown here for the number of available shots using batteries are not guaranteed. The number of available shots will also decline at low temperatures.

Conditions for use

Temperature: 0°C to +40°C (+32°F to +104°F) ; 80% humidity or less (no condensation)

Camera dimensions (WxHxD) 112.7 mm × 81.1 mm × 79.3 mm/4.4 in. × 3.2 in. × 3.1 in. (not including accessories and attachments)

Camera mass (weight) Approx. 340 g/12.0 oz. (not including accessories, batteries and xD-Picture Card)

Weight for photography Approx. 490 g/16.9 oz. (including batteries and xD-Picture Card)

Accessories See P.7

Optional accessories See P.105

Standard number of available frames/recording time per xD-Picture Card

The number of available shots, recording time or file size varies slightly depending on the subjects photographed. Note also that the difference between standard number of frames and the actual number of frames is greater for xD-Picture Cards with higher capacities.

These specifications are subject to change without notice. FUJIFILM shall not be held liable for damages resulting from errors in this Owner’s Manual. The LCD monitor/viewfinder (EVF) on your digital camera is manufactured using advanced high-precision technology. Even so, small bright points and anomalous colors (particularly around text) may appear on the monitor/viewfinder. These are normal display characteristics and do not indicate a fault with the monitor/finder. This phenomenon will not appear on the recorded image.

The operation error may be caused in a digital camera by the strong radio interference (i.e. electric fields, static electricity, line noise, etc.). Due to the nature of the lens, the edges of photographed images may appear distorted. This is normal.

Explanation of Terms

AF/AE Lock

On the FinePix S5100/FinePix S5500, pressing the shutter button down halfway locks the focus and exposure settings (AF and AE lock). If you want to focus on a subject that is not centered in the frame or change the picture composition after the exposure is set, you can obtain good results by changing the composition after the AF- and AE settings are locked.

Auto power save function

If the camera is not used in any way for 60 seconds, this function turns features such as the LCD monitor/viewfinder (EVF) off (sleep mode) to prevent battery depletion. If the LCD monitor/viewfinder (EVF) is turned off during playback, the Auto power save function turns the camera off. This period can be set to 2 or 5 minutes on this camera.

Deactivated batteries

Leaving an Ni-MH battery unused in storage for a long period may cause a rise in the level of substances that inhibit current flow inside the battery and result in a dormant battery. A battery in this state is referred to as deactivated. Because current flow is inhibited in a deactivated Ni-MH battery, the battery’s original level of performance cannot be achieved.

DPOF

Digital Print Order Format

DPOF is a format used for recording information on a storage media (image memory card, etc.) that allows you to specify which of the frames shot using a digital camera are to be printed and how many prints are made of each image.

Exif Print Format

A newly revised digital camera file format that contains a variety of shooting information for optimal printing.

Exif Print

Exit Print Format is a newly revised digital camera file format that contains a variety of shooting information for optimal printing.

White Balance

Whatever the kind of the light, the human eye adapts to it so that a white object still looks white. On the other hand, devices such as digital cameras see a white subject as white by first adjusting the color balance to suit the color of the ambient light around the subject. This adjustment is called matching the white balance.

PC Card Standard

A generic term for cards that meet the PC Card Standard.

PCMCIA

Personal Computer Memory Card International Association (US).

Sweep

A phenomenon specific to CCDs whereby white streaks appear on the image when there is a very strong light source, such as the sun or reflected sunlight, in the photography screen.

WAVE

A standard format used on Windows systems for saving audio data. WAVE files have the “.WAV” file extension and the data can be saved in either compressed or uncompressed format. Uncompressed recording is used on this camera. WAVE files can be played back on a PC using the following software: Windows: MediaPlayer Macintosh: QuickTime Player

Audio video interleave file format that handles images and sound as a single file. Images in the file are recorded in JPEG format. Motion JPEG can be played back by QuickTime 3.0 or later.

A standard for PC cards determined by the PCMCIA.
Safety Notes

Make sure that you use your FinePix S5100/FinePix S5500 camera correctly. Read these Safety Notes and your Owner’s Manual carefully before use.

After reading these Safety Notes, store them in a safe place.

About the Icons

The icons shown below are used in this document to indicate the severity of the injury or damage that can result if the information indicated by the icon is ignored and the product is used incorrectly as a result.

WARNING

This icon indicates that death or serious injury can result if the information is ignored.

CAUTION

This icon indicates that personal injury or material damage can result if the information is ignored.

The icons shown below are used to indicate the nature of the information which is to be observed.

Circular icons with a diagonal bar tell you that the action indicated is prohibited (“Prohibited”).

Filled circles with an exclamation mark tell you an action that must be performed (“Required”).

If a problem arises, turn the camera off, remove the batteries, disconnect and unplug the AC power adapter. Continued use of the camera when it is emitting smoke, is emitting any unusual odor, or is in any other abnormal state can cause a fire or electric shock.

Contact your FUJIFILM dealer.

Do not allow water or foreign objects to enter the camera. If water or foreign objects get inside the camera, turn the camera off, remove the batteries and disconnect and unplug the AC power adapter. Continued use of the camera can cause a fire or electric shock.

Contact your FUJIFILM dealer.

Do not use the camera in the bathroom or shower. This can cause a fire or electric shock.

Never attempt to change or take apart the camera. Never open the casing.

Do not use the camera when it has been dropped or the casing is damaged. This can cause a fire or electric shock.

Contact your FUJIFILM dealer.

Do not change, heat or unduly twist or pull the connection cord and do not place heavy objects on the connection cord. These actions could damage the cord and cause a fire or electric shock.

If the cord is damaged, contact your FUJIFILM dealer.

Do not place the camera on an unstable surface.

This can cause the camera to fall or trip over and cause injury.

Never attempt to take pictures while in motion.

Do not use the camera while you are walking or driving a vehicle. This can result in you falling down or being involved in a traffic accident.

Do not touch any metal parts of the camera during a thunderstorm.

This can cause an electric shock due to induced current from the lightning discharge.

Do not use the batteries except as specified. Load the batteries with the + and − marks.

WARNING

If heat, change or take apart the batteries. Do not drop or subject the batteries to impacts.

Do not attempt to recharge lithium or alkaline batteries.

Do not store the batteries with metallic products.

Do not use chargers other than the specified model to charge the batteries.

Any of these actions can cause the batteries to burst or leak and cause fire or injury as a result.

Use only the batteries or AC power adapters specified for use with this camera.

Do not use voltages other than the power supply voltage shown.

The use of other power sources can cause a fire.

If the battery leaks and fluid gets in contact with your eyes, skin or clothing. Flush the affected area with clean water and seek medical attention or call an emergency number right away.

Do not use the charger to charge batteries other than those specified here.

The charger is designed for Fujifilm HR- AA Ni-MH batteries. Using the charger to charge conventional batteries or other types of rechargeable batteries can cause the battery to leak fluid, overheat or burst.

Do not attempt to charge batteries other than those specified here.

When discarding or storing batteries, cover the battery terminals with insulation tape.

Contact with other metallic objects or batteries could cause the batteries to ignite or burst.

Keep xD-Picture Cards out of the reach of small children.

Because xD-Picture Cards are small, they can be swallowed by children. Be sure to store xD-Picture Cards out of the reach of small children. If a child swallows an xD-Picture Card, seek medical attention or call an emergency number.

Do not use this camera in locations affected by oil fumes, steam, humidity or dust.

This can cause a fire or electric shock.

Do not use voltages other than the power supply voltage shown.

Do not attempt to remove the xD-Picture Card from the slot too quickly. Use your finger to hold it and gently release the card.

Request regular internal testing and cleaning for your camera.

Build-up of dust in your camera can cause a fire or electric shock.

Contact your FUJIFILM dealer to request internal cleaning every 2 years. Please note this is not a free of charge service.

If water or foreign objects get inside the camera, turn the camera off, remove the batteries and disconnect and unplug the AC power adapter. Continued use of the camera can cause a fire or electric shock.

If a problem arises, turn the camera off, remove the batteries, disconnect and unplug the AC power adapter.

WARNING

Unplug from power socket.

Do not place heavy objects on the camera.

This can cause the heavy object to tip over or fall and cause injury.

Do not move the camera while the AC power adapter is still connected.

Do not pull on the connection cord to disconnect the AC power adapter. This can damage the power cord or cables and cause a fire or electric shock.

Do not place the xD-Picture Card in a sealed vehicle or in direct sunlight.

This can cause a fire or electric shock.

Do not store the batteries with metallic objects.

Do not attempt to recharge lithium or alkaline batteries.

Do not Subject the batteries to impacts.

Do not store the batteries with metallic products.

Do not use chargers other than the specified model to charge the batteries.

Any of these actions can cause the batteries to burst or leak and cause fire or injury as a result.

WARNING

When charging ends, unplug the charger from the power socket.

Leaving the charger plugged into the power socket can cause a fire.

Do not use this camera in locations affected by oil fumes, steam, humidity or dust.

This can cause a fire or electric shock.

Do not leave the camera in locations such as a sealed vehicle or in direct sunlight. This can cause a fire.

Keep out of the reach of small children.

This product could cause injury in the hands of a child.

Do not leave the camera in locations subject to extremely high temperatures.

Do not leave the camera in a car or other location where it is subject to extremely high temperatures.

Keep out of the reach of small children.

This product could cause injury in the hands of a child.

When charging ends, unplug the charger from the power socket.

Continued use of the camera can cause a fire or electric shock.

When charging ends, unplug the charger from the power socket.

If a problem arises, turn the camera off, remove the batteries, disconnect and unplug the AC power adapter. Continued use of the camera can cause a fire or electric shock.

WARNING

Unplug from power socket.

If a problem arises, turn the camera off, remove the batteries, disconnect and unplug the AC power adapter.

WARNING

Unplug from power socket.

Do not place heavy objects on the camera.

This can cause the heavy object to tip over or fall and cause injury.

Do not move the camera while the AC power adapter is still connected.

Do not pull on the connection cord to disconnect the AC power adapter. This can damage the power cord or cables and cause a fire or electric shock.

Do not use the AC power adapter when the plug is damaged or the plug socket connection is loose. This could cause a fire or electric shock.

Do not use the AC power adapter when the plug is damaged or the plug socket connection is loose. This could cause a fire or electric shock.

When charging ends, unplug the charger from the power socket.

Leaving the charger plugged into the power socket can cause a fire.

Using a flash too close to a person’s eyes may temporarily affect their eyesight. Take particular care when taking pictures of children.

When charging ends, unplug the charger from the power socket.

Leaving the charger plugged into the power socket can cause a fire.

When charging ends, unplug the charger from the power socket.

Continued use of the camera can cause a fire or electric shock.

WARNING

Unplug from power socket.

Do not place heavy objects on the camera.

This can cause the heavy object to tip over or fall and cause injury.

Do not move the camera while the AC power adapter is still connected.

Do not pull on the connection cord to disconnect the AC power adapter. This can damage the power cord or cables and cause a fire or electric shock.

Do not use the AC power adapter when the plug is damaged or the plug socket connection is loose. This could cause a fire or electric shock.

Do not use the AC power adapter when the plug is damaged or the plug socket connection is loose. This could cause a fire or electric shock.

When charging ends, unplug the charger from the power socket.

Leaving the charger plugged into the power socket can cause a fire.

Using a flash too close to a person’s eyes may temporarily affect their eyesight. Take particular care when taking pictures of children.

When charging ends, unplug the charger from the power socket.

Leaving the charger plugged into the power socket can cause a fire.

Using a flash too close to a person’s eyes may temporarily affect their eyesight. Take particular care when taking pictures of children.
